O. P. Austin

Chief of Bureau.

TREASURY DEPARTMENT,
Bureau of Statistics.

No. 12. SERIES 1898-99.

MONTHLY SUMMARY

OF

COMMERCE AND FINANCE

OF THE

UNITED STATES.

JUNE, 1899.

CORRECTED TO JULY 29, 1899.

PREPARED IN

THE BUREAU OF STATISTICS,
TREASURY DEPARTMENT.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1899.

EXPLANATIONS OF REGULAR STATISTICAL TABLES.

General imports.—The regular statement of imports of merchandise by articles and countries in this publication is what is termed the statement of *general imports*, embracing imported articles entered for immediate consumption on arrival, and articles entered for warehouse, as distinguished from special imports, which embrace imports entered for immediate consumption and withdrawals from warehouse for consumption.

The statement of *general imports* and the statement of *imports entered for consumption* for any period will differ to the extent that the value of *entries for warehouse* for the period differs from the value of *withdrawals from warehouse for consumption*. The term "*entry for consumption*" is the technical name of the import entry made at the customhouse, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion.

The values of articles imported since August 1, 1890, are governed by the provisions of section 19 of the act of June 10, 1890, which prescribes that the values of imported merchandise subject to ad valorem rates of duty shall be "the actual market value or wholesale price of such merchandise as bought and sold in usual wholesale quantities at the time of exportation to the United States in the principal markets of the country from whence imported and in the condition in which such merchandise is there bought for exportation to the United States or consigned to the United States for sale, including the value of all cartons, cases, crates, boxes, sacks, and coverings of any kind, and all other costs, charges, and expenses incident to placing the merchandise in condition ready for shipment to the United States."

Domestic exports.—The regular statement of domestic exports by articles and countries in this publication exhibits the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and articles, utensils, etc., made from imported materials. The value of exports of domestic merchandise is their value at the time of exportation in the ports of the United States whence they are exported.

Foreign exports.—The regular statement of foreign exports by articles in this publication, sometimes called "reexports," exhibits exports of foreign merchandise which had been imported. The value of such commodities exported "from warehouse" is their import value; the value of such commodities exported "not from warehouse" comprising free goods mainly, is the value at the ports of the United States whence they are exported.

Warehoused merchandise.—The regular statement of articles remaining in warehouse in this publication exhibits imported merchandise in bonded warehouses. This merchandise has already appeared in the statement of *general imports*. The official values of the articles therein represented are the same as the *import values*.

Tonnage tables.—In the tables of tonnage movement, in American foreign trade the tonnage is stated in net tons, of 100 cubic feet carrying space, after the prescribed allowances are made for crew space, engine space, etc.

Weights.—In all tables published by the Bureau the ton weight is 2,240 pounds and the hundredweight is 112 pounds, unless indicated otherwise.

Customs districts.—Statements of imports, exports, and tonnage movement are shown by customs districts, which have a certain prescribed limit of territory, with a port of entry. The customs districts having the port of entry with name different from that of the customs district are the following:

District.	Port of entry.	District.	Port of entry.	District.	Port of entry.
Alaska	Sitka.	Frenchman Bay, Me	Ellsworth, Me.	Oswegatchie, N. Y.	Ogdensburg, N. Y.

MISCELLANEOUS.

COMMERCE BETWEEN THE UNITED KINGDOM AND THE UNITED STATES:

Principal articles imported into and exported from the United Kingdom in its trade with the United States during the month and five months ending June 30, 1897, 1898, and 1899—

Imports from the United States.....	3158
Exports to the United States	3159

AMERICAN COMMERCE.

Commerce of American countries; general introduction.....	3163
Our commerce with South America unsatisfactory	3164
An American market for American goods	3164
A circuitous water route to South American countries	3164
Possible commercial development through modern electrical methods	3165
Share of the United States in the commerce of—	
Mexico	3165
Central American States	3166
The West Indies	3167
Colombia	3168
Ecuador.....	3168
Bolivia	3168
Peru	3169
Chile.....	3169
Argentina	3169
Uruguay	3170
Paraguay	3171
Brazil	3171
The Guianas.....	3172
Venezuela	3173
Transportation to the countries south of the United States	3173
Currency, including monetary system, monetary unit, and money in circulation.....	3175
Steamship lines and personal representation required.....	3176
Commercial notes—	
German capital invested in South America	3177
Ocean freight discrimination against the United States.....	3177
Personal work necessary to secure trade.....	3177
Advice to those contemplating residence in South America.....	3178
Market for textiles in South America.....	3178
Projected interoceanic railroad across South America.....	3179
United States coal for South America	3179
Canadian report on agricultural machinery in Mexico	3180
Postal money order service with Mexico.....	3180
Freight rates from New York to the City of Mexico	3181
Mexican commerce, and share of principal countries therein.....	3181
Mexican free zone described by Mexican officials.....	3182
Trade of Para and the Amazon valley.....	3185
United States goods in Brazil	3187
Warehouse for United States goods wanted in Brazil	3187
Coffee and rubber exports of Brazil.....	3187
European competition for trade in Uruguay.....	3189
Argentine imports, showing principal articles, 1895	3189
British official report on trade in Argentina and Chile.....	3191
Packing of goods for Chile	3192
British and German cotton textiles in Chile	3193
Commercial travelers in Peru	3193

a Includes gold and silver in ore.

NOTE.—Gold and silver can not be separately stated in domestic exports before 1864, but it is probable that the greater portion of the exports was gold.

VALUE OF CARRYING TRADE FOR THE MONTH OF JUNE, 1898 AND 1899.

AMERICAN COMMERCE.

The commerce of the United States with the American countries lying south of her borders has long been an object of solicitude to her statesmen, economists, and business men. With the English-speaking people of American territory lying upon the north her commercial relations have rapidly grown and proven mutually satisfactory. With those of another language, occupying the contiguous territory at the south, the growth has been slower and less satisfactory, and as the distance increases the growth decreases. To British North America the United States supplies 59 per cent of the total imports for consumption; to Mexico, equally adjacent, but speaking another language than our own, 49 per cent; to the Central American States, next removed by distance, though readily reached by water and now being tapped by railways, 37 per cent; to Colombia, a trifle farther removed, but equally accessible by direct water transportation, 33 per cent; to Venezuela, equally accessible, 27 per cent; to the West Indies, which lie in close proximity, but which have been up to the present time controlled by commercial nations whose policy in many cases has been to retain their commerce for their own people, 20 per cent; to the Guianas, also readily reached by water, 25 per cent of the imports of British Guiana, 17 per cent of those of Dutch Guiana, and but less than 6 per cent of those of French Guiana.

Up to this point the study of the growth of commerce between the United States and other American countries is fairly satisfactory. Beginning with 59 per cent of the import trade of Canada, 49 per cent of that of Mexico, and ranging on downward along the Gulf of Mexico and Caribbean Sea, a fairly satisfactory share of the commerce of those countries is enjoyed by the people of the United States; though it will be conceded that her people have a right to expect a larger share of the commerce of the countries lying so near at hand, especially in view of the fact that our purchases from them are much larger than our sales to them.

Even this somewhat unsatisfactory condition of trade with the countries bordering upon the Gulf of Mexico and the Caribbean Sea is, however, gratifying when compared with the trade relations of the United States with the countries of South America bordering upon the Atlantic and Pacific oceans. Of the total imports of all South America, 87 per cent is taken by the countries bordering upon the two oceans, and but 13 per cent by those bordering upon the Caribbean. Marching down the eastern coast of South America, we find Brazil importing, in 1897, goods to the value of over \$105,000,000, of which the United States supplied about 12 per cent; Uruguay and Paraguay, \$22,000,000, of which our share was less than 7 per cent; and Argentina, \$95,000,000, of which less than 7 per cent was from the United States, while a tour of the Pacific coast shows importations into Chile of \$24,000,000; Peru, \$8,700,000; Bolivia, \$11,600,000, and Ecuador, \$7,000,000, the proportion from the United States averaging about 10 per cent. Thus the northern coast of South America, fronting on the Caribbean Sea, imports goods to the value of \$36,000,000, of which we supply an average of 25 per cent; the eastern coast, fronting upon the Atlantic, \$222,000,000, and the Pacific coast, \$51,000,000, of which our proportion is in each case about 10 per cent.

Nor can it be urged that this condition is a temporary one. While exports from the United States to Mexico have grown rapidly, especially since the opening of railway communication, and have experienced a moderate development in the case of the countries bordering upon the Caribbean Sea, the total sales to countries south of us have not grown with the rapidity which has characterized those to the world at large. In 1868 our sales to the countries lying south of us were 20 per cent of our total exports; in 1878, a little less than 10 per cent; in 1888, a fraction above 10 per cent; and in 1898, but 7 per cent of our total exports.

An examination of our list of purchases from the Central and South American countries seems to increase the anomaly presented by their small purchases from us. Of Brazil, we are by far the largest single customer in her chief articles of export, coffee and rubber, while from Argentina and Chile our purchases of wool and hides are also heavy, and for the tropical products of the other countries of South America—sugar, spices, fruits, dyewoods, cabinet woods, textiles, and chemicals—the United States offers a constant and rapidly increasing market. From the countries of South America fronting upon the Atlantic and Pacific, the United States, in 1897, purchased goods valued at \$88,408,119, while her sales to them in that year were but \$24,480,013, or less than one-third of

her purchases from them; in 1898, in spite of the fact that to the whole world our sales were double the amount of our purchases, those to the South American countries beyond the Caribbean Sea were still but about one-third of the amount of our purchases from them.

OUR COMMERCE WITH SOUTH AMERICA UNSATISFACTORY.

It is thus apparent that the United States is not making satisfactory progress in her commerce with the American countries lying at the south, and that this unsatisfactory condition increases in proportion to the distance from the United States. To British North America the sales, as already indicated, have grown rapidly and satisfactorily, and to Mexico exports of merchandise from the United States are showing a gratifying growth, especially since the complete inauguration of close rail communication. To the countries bordering upon the Caribbean Sea, between whose ports and those of the United States there is comparatively frequent steamship communication, the growth of exports has been fairly satisfactory; but to that great stretch of country south of the easternmost point of South America, and extending around Cape Horn and up the entire western coast, conditions are not only unsatisfactory, but apparently growing more so each year.

AN AMERICAN MARKET FOR AMERICAN GOODS.

An examination of the details of the imports of the countries of South America suggests that the wants of their people could be readily supplied by the United States. Cotton goods, clothing, machinery, manufactures of iron and steel, furniture, medicines, coal, mineral oils, flour, provisions, and other merchandise of this character form the principal articles of their large and constantly growing importations—lines in which the manufacturers and producers of the United States are not only successful, but in which they are now proving themselves able to compete with the greatest and most experienced manufacturers and producers of the world. The details as to character, quantity, and source of supply of the articles imported by each of the countries in question are shown by the discussions of the commerce of the respective countries which follow and by the statistical tables covering their commerce for a term of years.

A CIRCUITOUS WATER ROUTE TO SOUTH AMERICAN MARKETS.

A study of the map of the world, and especially that which shows the relation of South America to the United States and Europe, seems to offer a partial explanation of the anomalous conditions with reference to the trade of all the countries lying south of the easternmost point of South America and stretching up its westerly coast. The commerce of the world reaching Brazil (south of the Amazon), Uruguay, Paraguay, and Argentina, on the Atlantic coast; and Chile, Peru, Ecuador, and the interior State of Bolivia, on the west, must reach them by water, and their sales to other parts of the world must also go by water. An examination of the map and of the routes of the steamships, the sole vehicles of transportation for these countries, shows that the markets of Europe are practically as near to all of South America fronting on the Atlantic and Pacific as are those of the United States. This may seem to the casual observer a startling statement, but an examination of the map and of the distances actually traveled by the great steamships following the usual course of commerce between the countries in question will justify it. The easternmost point of South America extends 2,600 miles farther east than New York, and the sailing distance from that point to New York is actually greater than that to the cities of Southern Europe and but slightly less than to the principal commercial cities of England and Germany, our greatest commercial rivals. This fact of itself would place the United States upon practically an equal footing with Europe in the matter of proximity alone; but when it is considered that nearly all of the steamship lines entering the ports of South America are controlled by European capital and European interests, it is not surprising that a large share of the commerce of those countries should be diverted to Europe. Naturally a considerable share of their exports goes direct to Europe, and to that extent it would be quite reasonable to expect that their purchases would be from that part of the world.

The fact that the exports from the United States to Europe greatly exceed the imports from Europe make it practicable for the vessels which bring the rubber, coffee, hides, and wool of South America to the United States to readily load at our ports with grain or provisions for Europe, and there load again with goods for the South American markets, thus making the tour of the triangle, of which the line from New York to Liverpool forms the base and the ports of Brazil and Argentina the apex. That this should occur under ordinary conditions would not be surprising, and that it should occur with lines of steamships controlled almost exclusively in the interests of European capital and European trade is to be expected. Added to this is the lack of banking and business facilities for direct intercommunication with the United States, neglect of American merchants to closely study the trade methods and requirements of the countries in question, the absence of direct solicitation of trade in the language of the country where business is sought, all of which are valuable aids in increasing the commercial relationship, and especially in increasing our sales to the countries in question. That closer, more frequent, and

direct steamship communication is an important factor in obtaining the commerce of countries which can be reached only by steamship lines is evidenced by the more rapid growth of our exports to the countries fronting upon the Caribbean Sea, with which fairly satisfactory steamship connections now exist, and suggests the advantages which may be expected to accrue to our trade with at least the western coast of South America when an isthmian canal shall place Ecuador, Peru, Bolivia, and Chile in as direct communication with ports of the United States as those fronting upon the Caribbean now possess. With a steamship route to western South America by way of the Isthmus, the completion of the trans-Andean road connecting western South America at Valparaiso with eastern South America at Buenos Ayres and Montevideo, and increased steamship facilities between our ports and those of both coasts of South America, the manufacturers and producers of the United States may reasonably expect to increase their sales in those markets, to which their annual exports are now but one-third the amount of their annual imports from them.

POSSIBLE DEVELOPMENT THROUGH MODERN ELECTRICAL METHODS.

One possible, if not probable, development of the near future in certain sections of Central and South America is worthy of consideration, and especially so with reference to the proposed intercontinental railway, since it relates especially to the regions which that line would invade. The possibility of utilizing, with the assistance of modern electrical methods, the enormous quantity of water power now going to waste in the mountain regions of Central America and northern South America is worthy of attention in considering the future possibilities of that section of the continent. The trade winds, sweeping westward across the Atlantic in the equatorial regions, become heavily charged with moisture evaporated from the ocean by the extreme heat of the sun, and striking the mountain chain stretching southward through Mexico, Central, and South America, are forced upward to a cooler atmosphere where the moisture is condensed into heavy rainfalls, thus feeding the mountain streams and rendering them capable of developing power in great and almost unmeasured quantities. With the facilities which modern electrical methods supply of utilizing, controlling, and conveying this power, the development of mining, mechanical, and manufacturing industries in that region, where nature is so lavish in her supplies and producing possibilities, may be very great within the near future, and especially so when access shall be obtained by the proposed railway lines which, if present plans are realized, will invade this very section and with lateral lines bring it into communication with the sea.

MEXICO.

Mexico gives to the United States a larger share of its purchasing trade than does any other of the American countries south of us. Proximity and the conveniences of rail, telegraph, and telephone intercommunication are the factors which have produced a more rapid growth in the share of the United States in the commerce of Mexico than that of other nations. While the United States does not control so large a percentage of the import trade of Mexico, her neighbor on the south, as she does in the case of Canada, her neighbor at the north, the advantage in the case of Canada is doubtless due to the fact that one language is spoken by the people of Canada and the United States, while this condition does not exist in the commercial relations between the United States and Mexico. Although Canada is nearer to and in more constant steamship communication with the European countries than is Mexico, and in the case of England has closer relations by reason of blood and governmental control, she takes from the United States 59 per cent of her purchases for home consumption; while Mexico, where the Spanish tongue prevails, although equally accessible to our markets and less convenient to those of Europe, takes only 49 per cent. This fact emphasizes the importance of familiarity with the language of the country in which trade is sought, a fact constantly pointed out by American representatives abroad and those engaged in commerce in foreign countries. The United States, however, is making rapid gains in her exports to Mexico, largely due, of course, to the increased facilities of rail transportation between the two countries, which, with the increased familiarity with language and customs, at the same time gives to the exporters of the United States a marked advantage in quickness of communication and promptness of delivery of goods ordered.

The exports of merchandise from the United States to Mexico, which in 1888 were \$9,897,772, were in 1893 \$21,206,939, an increase of 114 per cent. During the same time the exports from the United Kingdom to Mexico increased from \$6,683,432 in 1888 to \$8,427,989 in 1897, an increase of 26.12 per cent. The exports of France to Mexico in 1888 were \$8,471,374, and in 1897 \$5,123,488, a loss of 39.39 per cent. Germany, who has been making rapid gains in her export trade to all American countries south of the United States, sold to Mexico in 1888 goods valued at \$1,616,020, and in 1897 \$4,257,106, an increase of 8 per cent; while Spain, although speaking the same language, exported to Mexico in 1888 goods valued at \$1,344,885, and in 1896, the latest available figures, \$1,675,657. The most important of our exports to Mexico are manufactures of iron and steel, machinery, unmanufactured cotton, lumber, manufactures of wood, manufactures of cotton, and gunpowder. Under the general classification of "manufactures of iron and steel" the exports increased rapidly between 1890 and 1898, as did also builders' hardware and machinery, as will be seen by an examination of the accompanying tables. Unmanufactured cotton

exported to Mexico in 1898 amounted to \$1,321,473 in value, against \$1,217,805 in 1890, showing a slight increase; cotton cloths show a slight reduction, the total for 1898 being \$415,910, against \$468,757 in 1890, this decrease being due to the rapid increase in the cotton growing and manufacturing industries of Mexico. In the finer grades of manufactures there is a marked increase. Furniture and all other articles included under the general head of manufactures of lumber increased from \$328,707 in 1890 to \$515,676 in 1898; gunpowder and other explosives from \$364,568 in 1890 to \$756,494 in 1898; steam engines from \$283,005 in 1890 to \$559,401 in 1898. The total for 1898 is slightly below that for 1897, owing to the unusual demand for corn from the United States in 1897, of which the exportations in that year amounted to \$3,233,281, against but \$43,557 in 1898, in which year the home supply of corn in Mexico was equal to the home demand.

The imports of merchandise into the United States from Mexico nearly equal our exports to that country, and in addition to this Mexico sends us large quantities of her gold and silver in ore, for which we have better smelting and refining facilities than she possesses. The importation of precious metals into the United States from Mexico in 1898 were, gold, \$5,122,282; silver, \$25,028,888, including coin, base bullion, and ore, though the most of this was in the form of base bullion and ore. Of merchandise other than the precious metals, our total imports from Mexico in 1898 were \$19,004,863, against \$21,206,939 of exports to Mexico. The chief imports from Mexico are coffee, hides, textile grasses—especially sisal—cattle, lead, copper, and tobacco. The importations of coffee have materially fallen during the last few years, the imports of coffee in 1898 being \$3,599,392, against \$5,094,839 in 1891.

The importance of the trade of Mexico naturally attracts the attention of the civilized world. With an area nearly equal to that of all of the United States lying east of the Mississippi River, possessed of a fertile soil and semitropical climate, productive mines, and such supplies of natural water power as to give her valuable facilities for manufacturing, the future commerce of that country is looked upon as likely to be of great value. The supply of minerals is very large, including gold, silver, lead, iron, copper, quicksilver, tin, cobalt, antimony, coal, and petroleum, and the latest record (1894) shows over 3,000 mining enterprises in actual operation in the country. Coffee, tobacco, hemp, sisal, sugar, dyewoods and cabinet woods, are the most important of her products for the export trade aside from the precious metals, which form a large portion of her exports. Of the exportations of 1897-98, which amounted to \$128,972,745 in Mexican dollars (or \$59,069,519 in United States currency), \$75,042,332 was precious metals and \$53,930,417 merchandise. Of the \$128,972,725 of merchandise and precious metals exported in 1898, \$94,974,616 was sent to the United States, \$14,775,638 to Great Britain, \$6,995,733 to Germany, \$5,320,016 to France, all of these being stated in Mexican dollars. The relative importance of the exports, aside from precious metals, were Henequen, \$11,588,572; coffee, \$10,649,119; cattle, \$4,507,327; tobacco, \$4,489,768; hides and skins, \$3,597,077; wood, \$3,597,069, all in Mexican dollars.

CENTRAL AMERICAN STATES.

The divisions usually included under the term Central American States are Guatemala, with an area of 63,400 square miles, and about equal in size to the State of Georgia; Honduras, area, 43,000 square miles, about the size of the State of Virginia; British Honduras, area, 7,562 square miles, nearly equal in size to New Jersey; Salvador, area, 7,225 square miles; Nicaragua, area, 49,200 square miles, being slightly larger than the State of Louisiana, and Costa Rica, area, 23,000 square miles, nearly equal in size to West Virginia, making a total of 193,387 square miles, the area being considerably in excess of that of the New England and Middle States combined. The entire population, however, is but 3,488,383, or less than two-thirds of the population of Pennsylvania. With tropical climate and vegetation, mountainous and heavily wooded territory, lack of highways, and a comparatively small area of cultivation, the productions and exports and, consequently, the importations for consumption are relatively small. The total imports of the Central American States amounted in 1870 to \$11,720,475; in 1887 to \$15,800,285, and in 1897 to \$23,999,561. Of this amount the importations from the United States in 1887 were \$2,935,447; from the United Kingdom, \$4,941,464; from France, \$302,063, and from Spain, \$58,666. In 1897 the imports from the United States were \$7,939,907, as against \$2,935,447 in 1887, while those from the United Kingdom were \$5,266,444, against \$4,941,464 in 1887, those of France and Spain showing a considerable reduction in each case. Germany, for which details are not accessible prior to 1889, showed in that year exports to Central America valued at \$1,739,301, and in 1897 \$1,781,668. It is thus apparent that the United States is the only country showing any considerable increase in exports to the Central American countries in the decade, her total exports to the entire group having increased nearly 200 per cent meantime, while those of Great Britain showed a gain of less than 7 per cent, France and Spain a reduction, and Germany no material change.

Guatemala's imports in 1897 amounted to \$8,584,821 (gold), and her exports \$8,385,939, while in 1896 the imports amounted to \$11,429,200 and the exports to \$9,788,270. The chief imports in 1897 were cottons, \$1,716,994, and cereals.

Commercial statistics regarding Honduras are extremely meager. For the year 1895-96 the total imports were given at 1,322,418 pesos (value of peso, 49 cents), and the exports at 3,125,000 pesos. For 1896-97 the imports were 3,260,575 pesos and the exports 2,647,248. The chief exports in 1897 were: Precious metals, 1,075,000 pesos; cattle, 705,000 pesos; bananas and other agricultural products, 839,000 pesos. The trade is mostly with the United States, but Great Britain, Germany, and France also participate, the exports from the United Kingdom amounting to about \$200,000 annually, the chief article being cottons.

British Honduras, lying just south of Yucatan on the Caribbean Sea, is a British crown colony, with imports amounting to about \$1,500,000 (gold) and exports to about an equal sum.

Salvador, which corresponds in size with British Honduras, lies immediately west of Honduras, its ocean frontage being upon the Pacific. An official estimate in 1894 gave the population at 803,534, of which but about 20,000 are whites or descendants of Europeans. The population is largely engaged in agriculture, the chief productions being coffee, indigo, sugar, and tobacco. The mineral wealth of the Republic includes gold, silver, copper, iron, and mercury. The chief imports in 1896 were cottons, 961,554 pesos; spirits, 371,205 pesos; iron, goods, 183,616 pesos; flour, 132,438 pesos; silk goods and yarn, 142,389 pesos; coin, 119,199 pesos (value of peso in 1898, 42.4 cents). The chief exports are coffee, tobacco, indigo, and balsams.

Nicaragua, to which attention is especially attracted because of the facilities which it offers for an interoceanic canal, is about equal in size to Louisiana, its area being 49,200 square miles, while its population is 420,000 against 1,118,500 in Louisiana. The great mass of the population consists of aboriginal Indians, mulattoes, negroes, and mixed races, the number of Europeans and their descendants being less than 1,500, though their property in the Republic is estimated at over \$4,000,000. Of those of foreign birth 88 are German, 69 Italian, 60 from the United States, and 52 from Great Britain. The chief occupation of the inhabitants is the rearing of cattle and the growing of coffee. The British foreign office report for 1897 gives the imports at \$2,571,180 and the exports at \$2,976,025. Of the imports, about \$488,207 were from the United States, \$995,286 from England, \$462,142 from Germany, and \$359,000 from other countries. The chief imports from the United States in 1896 were barbed wire, \$29,000; beer, \$10,000; cotton goods, \$18,600; flour, \$155,000; drugs, \$37,000; sewing machines, \$11,000; kerosene, \$47,000; wine, \$60,000; calico, \$11,700; and tallow, \$16,400.

Costa Rica, the most southerly of the group of Central American States, has an area of about 23,000 square miles, about equal to that of West Virginia, but its population is but about one-third of that of West Virginia, being 294,940, against 762,794 in that State. The imports in 1895 amounted to 13,250,000 pesos (value of peso, 46.5 cents), though in 1896 they were but 4,748,818 pesos. The principal productions are coffee and bananas, though corn, rice, and potatoes are cultivated for local consumption. The principal export is coffee, and the chief imports are cottons, machinery, iron and steel manufactures, woollens, and worsteds. A report of the United States consul at San Jose gives the value of the importations in 1896 at \$4,540,060; \$2,478,429, or 52.50 per cent, was from the United States; \$1,220,775, or 26.80 per cent, from Great Britain, and \$843,545, or 18.50 per cent, from Germany.

THE WEST INDIES.

The West India Islands, taken as an entire group, form a large market for breadstuffs, provisions, and manufactures, their total importations having been in 1870, \$89,913,941; in 1887, \$106,862,820, and in 1897, \$137,327,190. Of this amount the United States supplied in 1887 about 27 per cent and in 1897 about 23 per cent. The details of the trade of the more important of these islands, Cuba, Porto Rico, and the British West Indies, have been discussed in the Monthly Summary of Commerce and Finance for the months of February and May, 1899. In general terms it may be said that the imports of the West Indies are cotton goods, manufactures of iron and steel, machinery, furniture, breadstuffs, and provisions. With an exceedingly fruitful soil and tropical climate they are able to produce sugar, coffee, tobacco, and tropical fruits, articles which are required in the temperate zone and for which they find ready sale in the United States, their nearest market. Under reciprocity treaty arrangements existing a few years ago the United States supplied a much larger proportion of the imports of certain of these islands than in the more recent years, though since the events of 1898 the exports from the United States to not only Cuba and Porto Rico, but to the West India Islands generally, have increased, a disposition to cultivate closer commercial relations being apparent among the people of nearly all of the group, under whatever flag. The total population of the West Indies is in round numbers 6,000,000, with an average of 647 to the square mile. This group, by far the most densely populated part of the territory lying south of the United States, exported in 1870 merchandise to the value of \$99,100,399; in 1887, \$130,749,238, and in 1897, \$163,024,007. The exports from the United States to the entire group amounted in 1892 to \$38,508,303; in 1894, to \$41,899,416; in 1895, to \$31,563,830; in 1896, to \$26,545,205, and in 1898, to \$26,442,894. The imports into the United States from the entire West India group amounted in 1892 to \$99,606,305; in 1895, to \$68,860,152, and in 1898, to \$32,070,631. This remarkable falling off in the imports into the United States from the West Indies is due, first, to a reduction in the price of sugar, one of their chief exports; and, second, to the great reduction in

the production of the islands, and especially of Cuba, in the war between the people of that island and Spain, by which sugar plantations and works were destroyed and the production of cane suspended. This condition applies also, though to a less extent, to the tobacco and tropical fruit industries.

COLOMBIA.

Colombia, although small in area when compared with many countries of South America, exceeds in size the entire group of Southern States lying east of the Mississippi River, its area being 513,938 square miles, and its population 4,000,000. The imports in 1897, the latest date for which the figures are available, were \$11,500,000. In 1897 the exports of Great Britain to Colombia were \$5,900,000; United States, \$3,800,000, and those of Germany, \$2,000,000. In 1892 the exports from the United Kingdom to Colombia were \$5,898,344; from the United States, \$3,134,152; France, \$5,809,300, and Germany, \$839,902. The United States thus supplied in 1892 but about 20 per cent of the total imports of Colombia, though the figures of the exports of the United States, Germany, and Great Britain to Colombia in 1897 indicate that the United States now probably holds a larger percentage of the trade than was shown by the official figures of 1892. Consul-General McNally, of Bogota, after referring to the commercial depression of Colombia during the past year on account of the change of administration and the small coffee crop, says that the United States manufactures have probably suffered less than those of any other country in the Colombia market. Exports from the United States to Colombia show little change during the last decade, those of France having materially fallen and those of Germany increased meantime, while those from the United Kingdom were about the same in 1897 as they were in 1887.

ECUADOR.

Ecuador, which lies directly south of Colombia and fronts only on the Pacific, has an area of 120,000 square miles, about equal to that of Ohio, Indiana, and Illinois combined, and a population of 1,272,000, which is about equal to nearly half that of the State of Ohio only. Although lying directly under the equator, the great elevation of its table-lands gives very considerable variety to its productions. Coffee, cacao, rice, sugar, rubber, cabinet woods, chemicals, and minerals are its chief products and exports. Its chief imports are cotton and other tissues, provisions, manufactures of iron and steel, clothing, and mineral oil. Fronting as it does only on the Pacific, its distance by water from the eastern part of the United States is very great, and as a consequence its purchases are largely from European countries. The exports from the United States to Ecuador have never reached \$1,000,000 annually, the nearest approach being in 1891, when the total was \$903,159, though that of 1898 was \$855,193. According to the message of the President of Ecuador delivered in August, 1898, the imports of 1897 amounted to 18,004,048 sucres (value of sucre in 1897, 47.4 cents; present value, 43.4 cents). British exports to Ecuador in 1897 amounted to \$2,000,000, the chief articles exported being cotton goods, \$1,350,000; woollens, \$200,000; iron, wrought and unwrought, \$130,000. The roads of the country are mostly bridle paths and often impassable for over half the year, and as a consequence articles intended for the interior must be made up in small packages. The one highway is from Quito toward Guayaquil for a distance of 115 miles, but the work of thus connecting the capital and chief port has long been discontinued. A railway is now under construction to connect Guayaquil and Quito, a distance of about 350 miles. This work is being conducted under the direction of citizens of the United States, and it is believed that its completion will result in giving to the United States a larger share of the imports of Ecuador and also materially increase the producing, consuming, and importing capacity of the latter country.

BOLIVIA.

Bolivia being entirely an interior country and having no seaport, the official statistics are fragmentary and largely estimates. Imports and exports pass chiefly through Antofagasta, Arica, and Mollendo on the Pacific coast, and in smaller quantities through the eastern river ports, Porto Suraz and Villa Bella. The total imports in 1897 are estimated at 24,467,100 bolivianos (value of boliviano, 43.4 cents). The chief imports are provisions, hardware, spirits, cottons, woollens, silks, and ready-made clothing, and the chief exports silver, tin, copper, coffee, and rubber. Bolivia has an area of 567,360 square miles, or considerably greater than that of the entire group of Southern States east of the Mississippi River, with a population of 2,019,549, or considerably less than that of North and South Carolina combined. The chief products are wheat, corn, barley, beans, and potatoes for local consumption; coffee for exportation, and sugar, which is grown chiefly for the purpose of distillation, while the production of rubber, cinchona, and cacao is increasing and form important articles of export, which in 1897 amounted in total to 23,121,320 bolivianos. Cattle, sheep, and llamas are numerous, and the wool product is woven into coarse cloth for the use of the Indians, who constitute one-half of the population, while the "mestizos," or mixed races, are estimated at one-fourth of the population, and the whites the remaining one-fourth.

PERU.

Peru, which stretches southwardly from Ecuador along the western coast of South America, has an area equivalent to that of California, Oregon, and Washington combined, being 463,747 square miles, and a population but slightly greater than that of the State of Massachusetts, being 2,621,000. It is estimated that 57 per cent of the population of Peru are aborigines or Indians; that 22 per cent belong to mixed races, "Cholos" or "Zambos," while the remaining 21 per cent are chiefly descendants of Spaniards, but include about 18,000 Europeans, 25,000 Asiatics, chiefly Chinese, and a very few from the United States. The imports of Peru in 1897 are given at \$8,065,792, of which amount \$737,856, or 9.15 per cent, was from the United States, while \$3,060,736 was from the United Kingdom, \$1,370,880 from Germany, and \$585,536 from France. The United States, however, appears to be gaining slightly, as her proportion of the imports in 1894 was but 6.8 per cent. The chief productions are cotton, coffee, and sugar. The cotton exports reached 5,586 tons in 1897, and coffee 1,239 tons. Cinchona, india rubber, dyes, and medicinal plants are also features of the products. The foreign commerce, which is chiefly with Great Britain and Germany, is carried on from several ports, of which the principal are Callao and Mollendo. The 1897 imports are given at 18,004,048 sols (value of the sol, 43.4 cents); the chief exports are sugar, silver ore, copper ore, coffee, wool, rubber, cocaine, and coca leaves. Over one-third of the imports into Peru are from Great Britain, one-sixth from Germany, and one-ninth from France. The chief exports from Great Britain to Peru in 1897 were woollens, cottons, iron, wrought and unwrought, and machinery.

CHILE.

Chile, which occupies the remainder of the western coast of South America south of Peru, also about equals in size the States of California, Oregon, and Washington, the area being 290,829 square miles and the population 3,049,352, or about equal to that of Peru. Thus the two countries which occupy the principal part of the western coast of South America are more than double the area of the States forming the entire western coast of the United States, but have, combined, a population nearly three times that of the Pacific coast at the last census. Chile, lying largely within the temperate zone, has developed a greater variety of industries and with greater success than its neighbors lying nearer to the equator. About 1,500,000 of its 3,049,352 population are engaged in agriculture, the wheat product alone being about 28,000,000 bushels, other cereals amounting to about 8,500,000, besides fruits and vegetables. Sheep and cattle are also largely grown, and wool, hides, and leather form the important features of her exports. The most important of the exports, however, is nitrate, the exportation of which is rapidly increasing. The total product of nitrate, which in 1885 was but 420,000 quintals, was in 1898 1,254,000 quintals. The importations in 1897 are given at \$23,908,524, of which \$10,614,775 was from the United Kingdom, \$6,013,230 from Germany, \$1,624,485 from the United States, \$184,428 from Spain, and \$5,474,606 from other countries, thus indicating that the United States has less than 7 per cent of the imports of Chile. The Statesman's Year-Book gives the value of the imports into Chile in 1896 at 30,249,002 pesos from Great Britain, 20,080,943 from Germany, 6,807,165 from the United States, 4,397,230 from Peru, 4,105,244 from Argentina, 2,834,216 from France, and 692,534 pesos from Italy (value of peso, 36.5 cents). The imports of 1897 included sugar, valued at 5,983,659 pesos; coal, 4,122,918; cotton and cotton goods, 3,937,000; sacks, empty, 2,440,209; illuminating oil, 1,458,090; cashmeres, 1,221,918; tea, 1,046,256, and galvanized iron, 1,292,176 pesos. Chile was the first State of South America in the construction of railways. In 1897 the total length of her lines open for traffic was 2,661 miles, of which 1,233 belong to the State. The trans-Andine line, which is expected to connect the Pacific with the Atlantic from Valparaiso, Chile, to Buenos Ayres, Argentina, lacks but 46 miles of completion to unite the two sections. Recent appropriations for completing the tunnels required for this purpose encourage the belief that it will soon be completed, and through land transportation thus given between the Pacific and Atlantic at this point.

ARGENTINA.

Argentina, the second largest of the countries of South America, has an area of more than one-half that of the entire United States and a population about equal that of the State of Illinois. The area is 1,778,195 square miles and the population, in 1895, 3,954,911. Although the population is comparatively small, the temperate climate and large grazing and grain-producing areas have enabled that population to produce for the markets of the world enormous food supplies, and, as a consequence, they have become large importers and consumers of the world's manufactures. The number of sheep in Argentina in 1830 was stated at 2,500,000; in 1860, 14,000,000; in 1870, 41,000,000; in 1880, 61,000,000; in 1891, 78,000,000; in 1895, 91,000,000, and in 1897, 105,000,000, while the wool product, which in 1830 was 6,000,000 pounds; in 1870, 130,000,000 pounds; in 1891, 310,000,000 pounds, was in 1897 472,000,000 pounds, the average product of wool per sheep having increased during the period under consideration from 2.3 pounds to 4.5 pounds. This shows that while the number of sheep has increased elevenfold in the last forty years the wool clip has grown fifteenfold. The production of cattle has also proven an important feature of the industries, though the increase has not been so rapid as that of sheep. The comparatively small

cost of producing sheep and cattle has encouraged the establishment of the frozen-meat industry, by which Argentina has been able to place her fresh meats in the markets of Europe. A company was organized in 1882 with British capital to establish warehouses for the freezing of slaughtered animals and suitable steamers for their transport in this condition. This was followed by other and similar establishments until the capital of the organizations now engaged in freezing and shipping mutton and beef is about \$6,000,000 (gold), and the exportation of frozen sheep has increased from 20,500,000 kilos in 1890 to 47,000,000 kilos in 1897, while the exportation of frozen beef also forms a considerable feature of the industry. About 2,500,000 sheep are now annually slaughtered, frozen, and shipped from Argentina, the value being set down at about \$2,000,000 (gold).

Wheat production also forms an important feature of the industries of Argentina, the estimated acreage of 1890-91 being 2,700,000 acres, steadily increasing until that of 1898-99 is estimated at 5,500,000, with an average yield of 15 bushels per acre, or about 82,500,000 bushels. Of this amount it is estimated that a little over two-thirds will this year be exported. The large production of cattle and sheep makes the exportation of wool and hides also an important feature of the commerce of Argentina, the exportation of wool in 1897 being 205,571 tons. The total exports in 1897 amounted to 101,169,199 pesos (value of peso, 96.5 cents), of which 74,044,525 pesos was the value of animals and their products and 23,336,369 that of agricultural products. The imports of 1897 amounted to 98,288,948 pesos, of which 30,449,912 pesos was textiles and apparel, 16,986,023 iron and manufactures, 12,896,503 vegetable substances, 8,011,029 pottery and glass, and 7,728,705 beverages. Of the 98,288,948 pesos of imports, the value of 36,392,057 was from the United Kingdom, 11,114,102 from Germany, 11,019,576 from France, 10,943,038 from Italy, and 10,101,714 from the United States, which thus stood fifth in the list of importing nations. In 1898 the imports, measured in dollars, were \$107,428,900, of which the value of \$32,012,600 was from the United Kingdom, \$13,695,241 from Italy, \$12,571,116 from Germany, \$11,129,075 from the United States, \$10,596,725 from France, and \$3,315,470 from Spain. The United States thus supplied 10.4 per cent of the imports in 1898, 10.3 per cent in 1897, and 9.9 per cent in 1896.

The length of railway, open for traffic in 1897 was 9,270 miles, and, as already indicated in the discussion of commerce and railways in Chile, the completion of 46 miles of road now under construction will place the Argentine and Chilean systems in communication and give rail transportation across the South American Continent from Buenos Ayres, on the Atlantic, to Valparaiso, on the Pacific. The imports of Argentina, it will be observed, average about \$25 per capita, or two and a half times as much per capita as those of the United States and fully twice as much per capita as the average importations of the countries lying south of the United States. The imports are largely manufactures, machinery, agricultural implements, railway cars, engines and supplies, and manufactures of iron and steel. The details of the imports are shown in tables on another page.

URUGUAY.

Uruguay, whose area on a casual examination of the map of South America appears somewhat insignificant, about equals in size the States of Ohio and Indiana, but its population is but little more than one-tenth that of those States. The area is 72,110 square miles, and the population was estimated in 1897 at 827,485. Lying wholly within the temperate zone, and in a well watered region, Uruguay, like Argentina, is a great producer of breadstuffs and provisions, the prime necessities of life. Within her small area a census made in 1896 showed 16,397,484 head of sheep and 5,881,402 head of cattle, 392,246 horses and 15,589 mules, the total value of the flocks and herds being estimated at \$73,038,000. The wool clip reached 33,000 tons in 1897, and the number of cattle slaughtered 671,000 head. The estimated wheat yield in 1897 was 300,000 tons. In addition to the more prominent agricultural industries, tobacco, olives, and the vine are also successfully cultivated, and of the 21,045 farmers 10,853 cultivate their own land. The average importation per capita of Uruguay is even greater than that of its large and prosperous neighbor, Argentina. The total importations in 1895 were given at \$26,249,233, and in 1896 at \$26,398,211 (gold), being an average of over \$30 per capita, against an average of \$25 per capita in Argentina. The importations in 1897 are given at \$20,175,681, and the exportations at \$30,316,438, showing a favorable balance of trade in that year of \$10,000,000. Of the \$26,398,211 importations of 1896, the value of \$7,041,486 was included under the general classification "Foods and drinks," \$6,613,786 as raw materials and machinery, \$4,704,799 as textiles, \$1,446,237 as apparel and haberdashery, \$250,723 tobacco, and the remainder grouped under the head of miscellaneous. Of the exports, which in 1897 amounted to \$30,316,438, the value of \$26,884,575 was animal products and \$1,202,674 agricultural products. The principal exports in 1897 were: Wool, \$12,482,802; hides and skins, \$6,634,461; jerked beef, \$4,312,904; beef extract, \$1,182,810; tallow, \$1,299,130. Great Britain is the chief source of supply for importations, especially in manufactured articles. Of the \$26,398,211 imports in 1896, merchandise to the value of \$7,524,803 was from Great Britain, \$2,843,802 from Germany, \$2,574,437 from France, \$2,283,357 from Italy, \$2,025,993 from Spain, and \$1,836,648 from the United States, which thus stood sixth in the list of countries outside of South America from which these supplies were drawn, the imports from the Argentine Republic being \$3,523,764 and those from Brazil \$1,444,901. The commerce between Uruguay and the United States makes little progress, the exports from the United States to Uruguay in 1898 being \$1,214,248, against

\$2,192,848 in 1889, and the imports from Uruguay in 1898, \$1,772,480, against \$2,986,964 in 1889. Of the population of 827,485, 70 per cent is native born, and of the remainder the greater number are Spaniards, Italians, French, Brazilians, and Argentines, the number of English and Germans being small, and the Spanish and French population being mostly Basques.

PARAGUAY.

Paraguay, which is considerably larger than Uruguay, has an area of 98,000 square miles, being about equal to that of New York and Pennsylvania combined, but a population of only 600,000 aside from Indians, as against 827,485 in Uruguay. Lying nearer the Equator and entirely in the interior, its production and commerce are less than those of equal areas on the coast. The number of cattle in 1896 was set down at 2,102,680 and the number of sheep 130,000. The most important industry is the growing of "yerba maté," or Paraguay tea, of which the exportation in 1897 was 6,548 tons, valued at \$5,475,633 in Paraguay dollars, the nominal value of the dollar or peso being 96 cents and its commercial value about 49 cents. The exportation of "maté," which was formerly in the hands of the Government, has now been transferred to those of capitalists and companies, and is rapidly increasing. The "maté" is a species of holly, from the prepared leaves of which a tea-like beverage is made. The leaves are prepared by roasting and pulverizing, after which boiling water is poured over them to form the tea, which is imbibed through a tube. It is an aromatic beverage whose general effect is that of tea and coffee, and is considered very refreshing and is much consumed by miners and other laborers, its use when once adopted being, however, very difficult to abandon, and the demand, where its use is once established, constantly increasing. This article forms a large proportion of the exports of Paraguay, the remainder being tobacco, hides, timber, and oranges. The imports are chiefly cotton goods, machinery, and provisions, the total importations of 1897 being \$2,203,459 (gold) in value. The direct imports from the United States are very small, being less than \$1,000 annually.

BRAZIL.

Brazil is the largest of the South American States, her area being considerably more than that of the entire United States (omitting Alaska) and her population about equal to that of New York, Pennsylvania, and Massachusetts combined. The area is 3,209,878 square miles and the population 14,333,915. Lying almost exclusively within the Tropics, her chief productions are coffee, sugar, tobacco, cotton, and rubber, though in certain of the provinces the cattle industry is important, while the forests and mines promise to be very valuable. Cotton mills are increasing in number, the latest statistics giving 155 cotton factories, also a number of important woolen factories, two silk mills, and two large flouring mills, which draw their supplies chiefly from Argentina and Uruguay. Coffee is the most important of the products of Brazil, forming, indeed, the largest share of the coffee product of the world. The fact that Brazil sells a very large proportion of its coffee and rubber to the United States gives to this country a somewhat larger percentage in her imports than in those of many other of the South American countries. The exports from the United States to Brazil, which, in 1888, were \$8,127,883 in value, in 1898 were \$13,317,036. The imports into Brazil from the United Kingdom are, however, much greater than those from the United States, having been in 1897 \$27,721,024, against \$31,951,789 in 1888. From France the imports are also larger than from the United States, being in 1897 \$16,917,622 and in 1888 \$15,453,898. From Germany the imports of 1897 were \$12,489,526, against \$5,247,900 in 1888. It is thus apparent that while the United States has gained more rapidly in exports to Brazil than have the United Kingdom or France her share in the commerce is smaller than that of either of those countries, and that Germany has made a larger increase than the United States.

A large proportion of the producing and consuming population of Brazil is near the southern border, and as a consequence located about the same distance from the great commercial centers of the United States as from those of Europe. Those of the great Amazon Valley, however, of which Para, with a population of 65,000, is the chief business center, is more accessible to the markets of the United States than to those of Europe, and as a consequence purchase more largely from this country than do those farther south, who are in direct communication with European countries through the steamship lines which converge at that point. Brazil has no regular statistical statements, and consequently details of her imports can only be estimated by consideration of the exports of each of the principal countries to Brazil. From the United States the principal exports to Brazil are manufactures of iron and steel, furniture, cotton goods, mineral oils, breadstuffs, and provisions. From the United Kingdom, which furnishes the largest share of Brazil's foreign purchases, the importations of cotton goods in 1897 were \$8,700,000; wrought and unwrought iron, \$2,900,000; woolen manufactures, \$800,000; coal, \$2,900,000; and machinery, \$1,600,000. The details of the exports from the United States to Brazil will be found in the tables on subsequent pages of this volume.

Published statements regarding the commerce of Brazil are frequently misleading because of the somewhat uncertain and confusing value of the currency of that country. The total value of the imports in 1897 is given at

671,603,280 milreis and the exports at 831,806,918 milreis. As the nominal value of the milreis is 54.6 cents gold, this indicates on the surface an enormous commerce. The facts seem to be, however, that the actual currency is a paper milreis, of which very large sums have been put into circulation, the total at the end of 1896, according to the Statesman's Year-Book, being 712,355,394 milreis, an average of about 50 milreis, or over \$27 per capita, had the paper remained at par. The gold and silver coins have, however, almost entirely disappeared, and while according to the Statesman's Year-Book the present nominal exchange rate of 2s. 2½d. was established in 1846, "the actual value of the paper milreis fell in 1868 as low as 1s. 2d.; in 1891 it touched 1s. 0½d.; in 1893, average 12d.; in 1894, average 10½d.; in 1895, 10¼d.; in 1896, between 8d. and 10d.; in 1897, between 7d. and 9d.; in 1898 it fell as low as 5¾d., but on July 31, 1898, it had recovered to 7¼d." On February 25, 1899, however, United States Consul-General Seeger, in a report to the State Department, says: "I am obliged to add a very unpleasant postscript to my report. During the last two weeks the Brazilian currency has again steadily decreased, and the quotation has fallen from 7½d. to 6¾d., the quotation of to-day."

The Statesman's Year-Book for 1899, estimating the value of the commerce of Brazil, which is stated in the depreciated milreis, says "The total value of exports from Brazil for the year 1897 is given, exclusive of specie, at 831,806,918 milreis = £26,752,224, at 7¾d. to the milreis; and the imports at 671,603,280 milreis = £21,567,660."

Hazell's Annual puts the value of the exports of 1897 at £24,500,000. U. S. Consul-General Seeger's report, in Commercial Relations for 1898, states that the exchange value of the milreis in sight drafts on New York ranged from 7.46 milreis per dollar (13.4 cents per milreis) in January, 1898, to 6.10 milreis per dollar (16.4 cents per milreis) in September, but his dispatch of February 25, 1899, above alluded to, indicates that it was on that date 6.48 milreis per dollar, or about 15.4 cents per milreis.

From these statements it would appear that the real value of the imports of Brazil in 1897 was about \$105,000,000 and the exports about \$130,000,000.

Brazil's most important export is coffee, of which she has the chief supply of the world. She has exported since 1880 over 100,000,000 bags of coffee averaging 132 pounds to the bag. Recent estimates put Brazil's production of coffee at 60 per cent of that of the entire world, and of her enormous exports of this article about one-half is sent to the United States, the 1896 exports to the United States being 4,658,816 bags, and to Europe, 4,625,666 bags. Of rubber, the next in importance of her exports, the United States is also the largest purchaser, the exports of 1895 to the United States being 11,251,410 kilograms, and to Europe 9,518,171 kilograms. The value of rubber exports from Brazil is growing more rapidly than that of coffee. The exports of rubber increased 33 per cent in quantity from 1889 to 1895, while those of coffee in 1897 were but 20 per cent above those of 1889, measured in quantity, but the price of coffee has so much fallen meantime that the money received for the exports has actually fallen. Coffee is still, however, much the largest item in value in the list of exports, being 509,190,115 milreis in value in 1897; rubber, 149,691,825 milreis; tobacco, 23,971,181 milreis; hides, 13,427,224 milreis, and cocoa, 12,757,957 milreis in value.

While Brazil finds the United States her best customer in coffee, rubber, and other exports, she buys little from this country in return, as attested by Consul Hill, of Santos, who, in a recent communication to the State Department, said:

United States trade at Santos is in the same state as at most South American ports. We have either a small import and export trade, bearing no comparison to that of the great commercial nations of Europe, as at Buenos Ayres, Montevideo, Callao, and Valparaiso, or we play a most important part in exports, as at Para, Rio de Janeiro, Maracaibo, and here; but in none are we of consideration as regards imports. Commerce between South America and the United States certainly follows rigidly the so-called "natural" lines of the orthodox economist, each buying of the other that and that alone which it can not elsewhere get—we coffee and rubber, and these people kerosene, lard, lumber, and to some extent flour and cotton goods. In the absence of statistics, which are absolutely unattainable, as the custom-house does not furnish them, the dimensions of our import trade can not be determined. The trade is small and I scarcely think growing. I have no idea that we are sending more manufactured goods than formerly, and perhaps not so much flour.

THE GUIANAS.

The three colonies on the northeast coast of South America, known, respectively, as British, Dutch, and French Guiana, have a total area of about 200,000 square miles, or slightly less than the area of Texas, and a population of 371,000, or about equal to that of Rhode Island. About half of the total area is included within British Guiana, whose population is given at 285,000, while that of Dutch Guiana is stated as 63,000, and French Guiana 23,000. Lying, as the territory does, almost under the equator, the agricultural products are chiefly sugar, cacao, coffee, and rice, and the principal imports are provisions and cotton goods. The total imports in 1897 were as follows: British Guiana, \$6,243,603; Dutch Guiana, \$2,265,335, and French Guiana, in 1893, the latest date for which the figures are attainable, \$2,107,753. Owing to the proximity of the United States, a larger proportion is drawn from that source than is the case of some of the other South American countries, 25 per cent of the imports of British Guiana, 17 per cent of those of Dutch Guiana, and 6 per cent of those of French Guiana coming from the United States.

VENEZUELA.

Venezuela gives to the United States a larger percentage of its import trade than does any of the South American countries, with the single exception of Colombia, though the Central American States, equally adjacent, take 37 per cent of their importations from the United States; Colombia, 33 per cent, and the West Indies 20 per cent. The importations into Venezuela in 1896 were \$13,241,000 in value, of which 27 per cent was from the United States. Trade between the United States and Venezuela has been stimulated within the past year by the establishment of a warehouse, under the direction of citizens of the United States, intended for the exhibition and sale of the products of this country. Machinery, manufactures of iron and steel, provisions, coal, furniture, cotton, linen, and woolen goods, mineral oils, and other products of this class are the chief articles of importation, while coffee, hides and skins, cabinet woods, rubber, and chemicals are the chief exports. The area of Venezuela is 593,943 square miles, or slightly more than that of Texas, New Mexico, Arizona, Oklahoma, and the Indian Territory, the population, according to the latest estimates (1894), being 2,444,816, or slightly less than that of the State of Missouri. The imports from the United States in 1897 were \$3,417,522, as shown by the export figures of the United States, while those from Great Britain, as shown by the export figures of that country, were \$2,700,000. Further details of the commerce of Venezuela will be found in tables printed on subsequent pages. They have been compiled from the export statements of the principal countries, no general statistics by the Venezuelan Government being available.

TRANSPORTATION.

Transportation within the countries lying south of the United States and between them and other parts of the world forms an extremely important factor in a consideration of their commerce. A large proportion of the territory of Mexico and Central and South America is unprovided with wagon roads and accessible only by pack trains, while the cities and towns are in but comparatively few cases accessible by railway lines. As a consequence shippers who attempt to cultivate the trade of these countries find it advantageous to so pack their goods that they can be easily handled on and off shipboard in lighters or small rowboats and can be still further segregated in such manner that they can be readily transported by pack animals without repacking and rearranging. These details as to the necessity of preparing goods in a manner convenient for landing and internal transportation are discussed in the various statements which follow, prepared by United States consuls and others who have made a personal study of the requirements of local traffic or internal commerce in the countries in question.

A subject of far more importance to our commerce with those countries, however, is that of the methods of transportation between the United States and the countries of Central and South America, especially the latter. While the proposed intercontinental railway, suggested many years ago by Hon. Hinton Rowan Helper, then United States consul in Argentina, seems gradually approaching realization, over 5,000 miles of line yet remain to be completed, at an estimated cost of \$175,000,000, the distance already covered by constructed lines between New York and Buenos Ayres being 4,772 miles. It is thus apparent that to a large proportion of the countries of Central and South America the sole vehicles of communication are those which pass by water and that upon the facilities for water transportation must depend the success or otherwise of efforts to cultivate and increase commerce with the countries in question.

That the United States is at present at a decided disadvantage in the matter of water transportation to the countries lying south of its borders is evident. A recently published statement of the commerce of the port of Callao, Peru, shows that of the 314 steam vessels, with a tonnage of 487,035 tons, entering that port in 1898, only 3, with a total tonnage of 941 tons, were from North America, while of the 172 sailing vessels, with a tonnage of 94,009 tons, only 2, with a tonnage of 1,390 tons, were from North America. A similar statement relating to the commerce of the port of Buenos Ayres, Argentina, shows that of the 1,042 steam vessels, with a tonnage of 1,825,402 tons, entering that port in 1898, not a single one was classed as from the United States, while of the 347 sailing vessels, with a tonnage of 282,335 tons, but 41, with a tonnage of 27,639, were so classed. The Commercial Year Book of 1898, issued by the New York Journal of Commerce and Commercial Bulletin, under the head of "Steamship lines from New York to foreign ports," shows that of the nine lines from New York to South America only two sailed under the American flag, the service of one of these being only to the countries on the northern coast of South America fronting upon the Caribbean Sea, while the other renders a freight service "about once in two months" to ports in Chile, Peru, and Ecuador.

An examination of the records of the principal countries doing business with the countries of Central and South America shows in broader terms the disadvantage under which the citizens of the United States attempting to do business with Central and especially South America labor in this particular. The tonnage of the vessels

clearing from ports of the United States for South America in the fiscal year 1898 was 926,543 tons, of which a total of but 323,224 tons was carried by vessels under the American flag, 603,318 tons being under a foreign flag. The tonnage of vessels clearing from the ports of the United Kingdom for South America in the same year was 2,588,020 tons, and of this over 2,000,000 tons went under the British flag. From the ports of Spain the tonnage of the vessels clearing for South America in 1896, the latest obtainable date, was 1,040,988 tons, while that of the vessels clearing from the ports of France to South America was 865,226 tons, and from Germany 625,211 tons. The tonnage of vessels clearing from the ports of the United States, United Kingdom, Germany, France, and Spain for South America in the latest obtainable year was, in round terms, 6,000,000 tons, of which a total tonnage of but 926,542 tons cleared from the ports of the United States, of which a total tonnage of but 323,224 tons was carried under the American flag, and of this 122,001 tons was by sailing vessels and 201,223 by steam vessels.

The entrances of vessels at ports of the United States from the ports of South America were, however, much larger, being 1,590,683 tons in 1898, against 1,651,487 tons entering the ports of the United Kingdom from South America, 1,023,440 tons entering the ports of France, 730,574 tons entering the ports of Germany, and 323,136 tons entering the ports of Spain. It is thus apparent that the number and tonnage of vessels coming into the ports of the United States from South America are very much greater than those departing from her ports for South America. It is also apparent that the number and tonnage of vessels leaving the United Kingdom for South America are greater than those entering her ports direct from South America. This confirms the statement made elsewhere that a considerable proportion of the vessels sailing from South American ports to the United States, after discharging their cargoes at our Atlantic ports, load there direct for Europe, and after discharging their cargoes in European ports, load again for South America, thus completing the circuit of the triangle and holding at a disadvantage merchants of the United States who desire to do a direct export business with South America, but giving to merchants of Europe the advantage of continuous steamship service direct from European to South American ports. Indeed, merchants in the United States desiring to cultivate trade with South America frequently assert that they can more advantageously send their goods by way of Europe than to attempt to send them direct from the United States to South America. A table which is printed elsewhere in this volume shows the number and tonnage of vessels entering and clearing in the commerce of the principal countries with American countries south of the United States, and a study of its figures in conjunction with those showing our percentage in the commerce of the various countries lying south of the United States indicates the close relationship between the carrying trade and the commerce between the countries affected.

An examination of the map accompanying this volume, showing the transportation routes between the United States and other American countries, will indicate more clearly the conditions than will any elaborate discussion. Existing railway lines are shown and the necessary lines to connect the systems of North and South America, as surveyed by the Intercontinental Railway Commission, are also indicated. Steamship routes from the principal ports of the Atlantic and Pacific coasts are also given, with distances from point to point, and the study of these in conjunction with the tables showing the percentages of trade which the United States enjoys with the various sections of America south of her borders will prove extremely suggestive. As already pointed out, the United States enjoys a fair share of the commerce of the countries fronting upon the Gulf of Mexico and Caribbean Sea, with which her business centers now have direct steamship connection. The Isthmus of Panama and the west coast of South America, it will be seen by a study of the map, lie almost due south of the great business centers of the Atlantic and Gulf coasts. With a ship canal vessels from the United States would pass in an almost direct line from her eastern and southern ports to all of the west coast of South America and bring the United States into direct communication with that most rapidly developing section of South America located within the temperate zone, where railway systems, production, and commerce are now so rapidly developing. With the completion of 46 miles of the railway line between Valparaiso, Chile, Buenos Ayres, and Argentina, goods from the eastern and southern ports of the United States would find a direct route through the isthmus, along the western coast of South America and by rail through Chile to Argentina, Uruguay, and the most densely populated and productive section of Brazil, instead of being compelled, as at present, to make a detour of 2,600 miles to pass the easternmost point of the South American continent.

CURRENCY.

The fifty-seven million people occupying the countries south of the United States have a total currency of about \$1,000,000,000, but of this sum more than three-fourths is shown by the report of the Director of the Mint to be "uncovered paper," while \$150,000,000 is silver, most of which circulates merely at its bullion value, and but \$90,000,000 is gold. Thus in round terms it may be said that the currency of the countries lying south of the United States averages \$1.50 per capita gold, \$2.50 per capita silver, and \$14.50 per capita paper. That the paper currency

is extremely uncertain in character is shown by the fact that in as prosperous a country as Argentina gold is at the present time reported at a premium of 178 per cent, measured in the paper currency, while as shown in the discussion of conditions in Brazil, the exchange value of the paper money of that country is but about one fourth of its face value in gold. The details of the currency conditions in each of the principal countries in question are shown by the following table:

MONETARY SYSTEM AND MONEY IN CIRCULATION IN THE COUNTRIES SOUTH OF THE UNITED STATES.

[Prepared by the Director of the United States Mint.]

COUNTRIES.	Monetary system.	Monetary unit.	Value in United States currency.	Stock of gold.	Stock of silver.	Uncovered paper.
			Dollars.	Dollars.	Dollars.	Dollars.
Venezuela	Gold and silver	Bolivar	0.193	20,600,000	2,600,000	562,000
Colombia	Silver	Peso	a.443	2,000,000	31,000,000
Ecuador	Silver	Sucre	a.443	500,000	2,678,000	4,682,000
Bolivia	Silver	Boliviano	a.443	7,150,000	3,233,000
Peru	Silver	Sol	a.443	1,000,000	6,000,000	36,315,000
Chile	Gold	Peso365	9,490,000	2,020,000	1,502,000
Argentina	Gold and silver	Peso965	30,000,000	292,704,000
Paraguay	Depreciated paper	Peso	93,000	6,000,000
Uruguay	Gold	Peso	1.034	15,800,000	4,000,000	4,522,000
Brazil	Gold	Dollar	1.000	370,224,000
French Guiana	Gold and silver	Franc193
Dutch Guiana	Gold and silver	Florin402
British Guiana	Gold and silver	Pound sterling	4.8665
Mexico	Silver	Dollar	a.481	8,000,000	106,000,000	4,000,000
Costa Rica	Gold	Colon465
Other Central American States	Silver	Peso443	1,000,000	17,000,000	7,500,000
Cuba	Gold and silver	Peso926	2,000,000	1,500,000
Haiti	Gold and silver	Gourde965	4,600,000	1,500,000	4,100,000

a Bullion value, July 1, 1899.

A HALF CENTURY OF COMMERCE WITH COUNTRIES SOUTH OF THE UNITED STATES.

A study of the table on page 3219, which shows the commerce of the United States in merchandise with Mexico, West Indies, Central America, and South America, and the totals for that entire area from 1850 to 1899, proves especially interesting and suggestive. An examination of these figures will show that the United States has not made as rapid gains in her exports to these countries as in her imports from them, or in her exports to other parts of the world. Imports into the United States from the south have, during that period, grown enormously, while in exports to that section the gain has been comparatively small. The imports have grown from \$32,000,000 in 1850 to an average of over \$200,000,000 per annum, except where recently interrupted by the war between Cuba and Spain, which greatly reduced the producing and exporting capacity of that island during the past two or three years. On the other hand, the exports from the United States to the countries in question, which in 1850 were \$21,815,000, have never reached as much as \$100,000,000 save in the exceptional year ending June 30, 1893, in which reciprocity treaties were followed by a marked increase in the exportations from the United States to the West Indies and other parts of the territory in question. During the last ten years of the half century under consideration the exports from the United States to the American countries at the south were but 183 per cent greater than during the first ten years of that period, while the imports from these countries were in the closing decade of the period 273 per cent greater than during the opening decade of the term. During the first decade of the period our sales to the countries at the south of us amounted to \$319,600,000, while we bought from them \$577,000,000; during the last decade of the term our sales to them were \$904,000,000, while our purchases from them amounted to \$2,135,000,000. During the first decade of the period under consideration our exports to the countries south of the United States were 13.90 per cent of our total exports, and during the last decade of the term but 10.65 per cent; while, on the other hand, the imports into the United States from those countries in the first decade of the half century were 21.65 per cent of our total imports, and in the last decade were 31.05 per cent.

GENERAL STATISTICAL STATEMENTS.

The tables which follow show the total imports of each of the countries and islands south of the United States and the share of the principal countries of the world therein, so far as can be ascertained; also the details of the commerce of the United States with each of the countries and islands in question for a term of years. It is proper to add that a large proportion of the countries of Central and South America have little available material of a statistical character relating to their commerce, and in such cases it is necessary to obtain details from the reports of the great commercial nations with which their commerce is chiefly conducted.

In some cases the fluctuating character of the currency in which the value of the commerce is stated renders an accurate determination of its real value difficult. The statistics of the Mexican Government state the value of imports in gold, but the exports in Mexican silver dollars, the value of which fluctuates with the price of silver, having ranged from 83.7 cents on January 1, 1891, to 46 cents on January 1, 1897, and 47.7 cents on January 1, 1899. The value of the Brazilian milreis, in which statements of imports and exports are made, has, as explained elsewhere, ranged downward from its normal value of 54.6 cents to less than one-fourth that sum, and in other cases fluctuating values in currency have presented similar difficulties in obtaining accurate statistics.

COMMERCIAL NOTES.

STEAMSHIP LINES AND PERSONAL REPRESENTATION REQUIRED.

The need of direct United States steamship lines between the United States and South American ports, and personal representation in their markets, is pointed out in a letter written by a prominent merchant of Rio de Janeiro, Mr. Othon Leonardos, jr., and published in the Consular Reports of the State Department. It says:

There is a large field here for the products of American industry. The two greatest impediments to the expansion of American trade in Brazil are poor transportation facilities and the want of direct representation of your manufacturers. As a rule, we have in Rio but two old and slow steamers a month from the United States, and their import trade with Brazil is so organized that there are no direct relations between the American manufacturer and the Brazilian merchant. Everything is done through more or less expensive commission men. The lack of an American bank here is also a general drawback. American manufacturers ought to have a bureau here in which there would be a permanent exposition of their products.

England, France, Germany, Portugal, Italy—all these countries have their lines of steamers and their banks here; their capital is being constantly invested in industrial and commercial enterprises. What does your country possess here? No line of steamers, no banks, no industrial enterprises; there is no investment of capital, with the exception of a few commercial houses.

In regard to the merchandise handled by our house (Leonardos & Co.), I will relate my personal experience concerning articles of American manufacture. My efforts to introduce these goods in the Rio market have been very successful. Cut glass and molded glass are of importance, and I will speak of them first.

Cut glass from Fairpoint competes easily in quality and beauty with the English and French article. It is somewhat higher in price, but sells readily on account of its beautiful designs. The moldings and pressed glassware of certain American factories are as well made and as white as those we import from other countries; they are perhaps better, and, their price being lower, I think they will in time find a good market here. The same applies to bottles, jars, and other articles used by druggists. I think they can easily compete with products from other countries.

American plated metals, silver and nickel plate, from the factories of Reed & Barton (Connecticut), Meriden Britannia Company, and others, are beginning to be favorably known in our markets, and, owing to their price, can well compete with the metals of Elkington, England; Christofle, Paris; Krupp, Austria; and others. I may remark, in this connection, that American plated ware pays only half the rate of duty that plated wares from other countries pay; copper entering into their composition, if at all, in a very small proportion. The importation of plated ware from the United States is susceptible of great development.

American petroleum lamps are not known here; but their quality is superior to those we import from Belgium and Germany. Their price is the same, or even lower.

I have thus given an account as far as my own line of business is concerned. As to other American products, they are beginning to be well known in our market, but as yet are not largely exploited, for the reasons I have mentioned above.

American leather, electrical appliances, photographic apparatus, agricultural implements, and all kinds of manufacturing machinery bicycles, preserves, etc., are well known and greatly appreciated here. It only remains to strengthen the ties between our two countries, by improving means of communication, and securing for commerce and trade with the United States the proper representation here.

GERMAN CAPITAL INVESTED IN SOUTH AMERICA.

[From the European Economist.]

It is worth while to study the enormous extension of financial, industrial, and mercantile enterprises of the Germans in South America. We find in Brazil the Brasilianische Bank, with a capital of 10,000,000 marks, in Rio de Janeiro, São Paulo, and Santos; the Deutsche Überseeische Bank with a capital of 20,000,000 marks, in Buenos Ayres and Valparaiso; the Deutsche Bank of Chile, with a capital of 10,000,000 marks in Valparaiso. Germany is interested in Brazilian mines and railroads to the extent of 62,000,000 marks. In Venezuela the Germans have invested 50,000,000 to 60,000,000 marks in railroads. A considerable number of industrial enterprises of various kinds have been created in South America under their auspices—breweries, hat and shoe factories, paper mills, coach factories, soap and candle factories, cotton factories, foundries, machine shops, etc.

They have contributed much capital to the foundation of Liebig's meat-extract factories; they have invested millions in the saltpeter mines of Chile and in the mines of Peru. It is not easy to estimate the total of German capital invested in financial and industrial enterprises, but from the best information available we give the following data: In Guatemala the Germans have invested 140,000,000 marks; in Mexico, 134,000,000 marks; in Venezuela, 200,000,000 marks; in Brazil, 600,000,000 marks; and in Chile, 100,000,000 marks.

OCEAN FREIGHT DISCRIMINATION AGAINST THE UNITED STATES.

Freight discrimination against goods from the United States and in favor of those from European markets, made by the European steamship lines, which practically control the carrying trade of South America, is described by United States Consul-General Seeger in a report to the State Department published in the advance sheets of the Consular Reports:

I regard it my duty to again call attention to a serious obstacle in the healthy development of our trade with Brazil, viz, the conditions created by the combination of the foreign transportation companies, whose steamers are plying to and from the ports of Brazil.

These companies are: Lamport & Holt, Liverpool; Prince Line, Newcastle; Norton Line, Liverpool; Sloman Line, Hamburg; Chargeurs Réunis, Havre.

These lines, which constitute a trust, had in August last reduced the freight rates on coffee (almost the only return cargo of the steamers plying between the United States or Europe and Rio de Janeiro and Santos) to 10 cents per bag, in order to drive out of Brazilian waters the trans-Atlantic steamers whose owners did not enter into the above-mentioned agreement. About six weeks afterwards, when the "tramp" steamers (so called by the trust) were hunted down and the refractory coffee shippers brought to terms, freight rates were increased again to 30 cents a bag, which rate is charged at present. One of the results of this practice is that there is not enough freight room available at present for the export trade of the United States with Brazil, and those who want to import merchandise into Brazil before the date on which the increased tariff goes into effect (January 1, 1899) are frustrated to a very large extent.

Another serious obstacle to our competition in Brazil with European exporters is the fact—complained of by Rio de Janeiro and São Paulo importers of American goods and probably traceable to the same combination of non-American shipowners—that freight rates to Brazil are (unnecessarily) higher from the United States than from the European ports. A Rio de Janeiro commission merchant told me not long ago that he made an additional profit on flour bought in New York by shipping it via Hamburg; and the head of a well-known São Paulo house of importers and manufacturers of agricultural and coffee machinery told me last week that in buying a large quantity of pig and cast iron, he could not avail himself of the lower prices offered by American houses as against European competition, on account of the higher freight rates from New York. From the manifest, I saw that a cargo of flour recently arrived here from New York paid 85 cents per barrel, while the scheduled steamer freight of flour from Hamburg to Rio de Janeiro or Santos is 30 marks (\$7.14) per ton (of 11 barrels).

In this connection I may say that the published freight tariffs of the different steamer lines can hardly be taken in evidence in regard to the freight actually charged against different shippers, as the representative of one of the members of the steamer trust has assured me, stating that trans-Atlantic freight rates are, in all cases of importance, the subject of specific agreements.

The above described are among those conditions which ought to be taken into consideration by those who try to understand why the United States is not having its fair share of the import trade of Brazil.

PERSONAL WORK NECESSARY TO SECURE TRADE.

Circulars, catalogues, and price lists, says Consul Jarnigan in the United States Consular Reports, are of little value in an attempt to obtain trade in Central America:

In no other way save through personal and direct work can trade be secured. Merchants and manufacturers should have impressed upon them that which the consular service seems powerless to make understood, to wit, that these goods must be manufactured and selected with an eye single to the tastes, needs, and preferences of the people. They must be packed in parcels, boxes, etc., in size, shape, and weight to suit the trade. All must be packed in a way to, in part at least, insure against loss during transportation and to be as nearly waterproof as possible.

Our well-informed exporters must know that a wharf where vessels can land goods in safety is a thing almost wholly unknown in Spanish America. Nearly everywhere merchandise is conveyed from the ships to the shore in small boats, through many hundred yards of surf. One often sees bales and packages of goods literally floated ashore—even hardware, cutlery, etc., including the ever-present “machete,” are packed in waterproof and therefore not injured by salt water in the process of “landing.”

A thoroughly qualified agent, by direct contact with the people, and through the instrumentality of properly worded and illustrated catalogues, can greatly increase our trade from the outset. These people are thoroughly friendly to Americans and really wish to increase their commercial relations with us.

However the situation may be viewed by my countrymen, I can assure them that in this effort at education they must begin at home. The manufacturer and merchant must be taught how to pack goods for Spanish-American markets. They must learn that the bulk of exports, to reach the consumer in the rural districts, must at some point of the route be packed upon bronchos and mules and transported over mountain and canyon, where trails are dignified with the name of road and where wheels are unknown. They must learn that a merchant in making his purchases will not buy a case large and unwieldy, necessitating unpacking and consequent risk, when the same goods, or “just as good,” can be had packed in small waterproof packages of convenient shape and weight. They should know that goods of one class only should be put in a package. If a dutiable article, however small, is put into a package of goods on which there is no duty, the whole package would become dutiable at the rate of duty on said small article. Different classes of goods have different rates of duty, and when those of a low rate of duty are packed with articles having a high rate of duty all are assessed at the highest rate.

FRANK ADVICE TO THOSE CONTEMPLATING RESIDENCE IN SOUTH AMERICA.

[From the Buenos Ayres Herald, April 8, 1899.]

Those of the English-speaking race who think of leaving their native land for these shores should note the condition of other people who have gone to a country where the language is different from their native tongue, and then reflect that they would be situated here pretty much as a Spaniard, for instance, who landed on American or British soil and was ignorant of English. They should bear in mind that the language of this country is Spanish; that the people are in a great measure of the Spanish race, and have its customs and characteristics; that while there is complete religious liberty, the Catholic Church is that of the State. They should also reflect that the social observances of the country are very different from those of the English-speaking races. Coming to particulars, it may be stated that no mechanic who is not an expert or a specialist in certain occupations should come here hoping to better his condition, for the very simple reason that the country is already overrun by workmen from southern Europe, who are content to work for lower wages than any British or American mechanic would care to accept. Italy can easily outbid America or Britain in most departments of labor; and, as a matter of fact, the operatives and manufacturers here are either Italians or Frenchmen, principally the former. This remark applies to all varieties of mechanical labor, with the exception of specialties, such as electrical engineering; but in this field there is already a congestion in this Republic. We would strongly advise English and American mechanics not to think of coming here to improve their condition. The same advice applies to manufacturers of all sorts. Not only is there a full supply, but the market is overstocked with products of native manufacture, for the most part of a very inferior kind.

With regard to agriculture, our discouraging advice would be emphasized. The farmer here is the Italian or the Basque, who can live in a manner to which English-speaking people are not accustomed, and will work for wages which these would consider sufficient only to escape starvation. At the moment we write there are hundreds of men now seeking employment who would be glad to work for \$2 a day of the money of this country (which is equal to about 90 cents American currency) and board themselves; and this in face of the fact that the cost of living is greater here than in New York or London. Those who have capital to lend on mortgage or who can invest in real estate can safely get twice as much interest or income as in England or America. Those who have a small capital, say of \$5,000 or \$10,000, and are ready to go to the frontier to live a rough life for years, where they will never hear their native tongue, where they will certainly suffer from homesickness, where the conditions of life to English people are nearly unbearable—such persons in the course of time will come out with more dollars, if they come out at all, than they would amass at home. The climate in this country is magnificent; no place in the world can surpass it in that respect. It is essentially a white man's climate. Stock graze in the open all winter, even in the coldest localities. The country has a great future, but no man in his senses would take the responsibility of advising English people to immigrate or to come except with capital, as we have already stated. True, many have come individually and have done well, but every attempt to establish a colony of English-speaking people has proved a miserable failure.

MARKET FOR TEXTILES—SOUTH AMERICA.

The German textile journals are advising the cloth manufacturers and dealers of that country to send goods to South America, especially to the places more difficult of access, which have not been invaded. Consul Monaghan, of Chemnitz, sends the State Department a summarization of this advice, and says:

On the Pacific a few mills make buckskins, chevots, blankets, etc., but because of the enormous cost for freightage over the Andes sales are local. Mules have to carry goods over the comb of the Cordilleras, and this cost cuts off all possibility of competition with countries as well equipped as are England and Germany; this, in spite of steamship freight rates, which run \$30 per cubic meter (35.547 cubic feet), and import duties based on a desire to obtain revenues as well as to protect home industries.

Up to the present the demand for German goods has been confined to manufactured articles. Among these are moleskins, in good and middle grades, in whole "cuts" or pieces of $2\frac{1}{2}$ yards; woolen and cotton blankets (England competes in this line); cotton and silk laces, and summer worsteds in cheap and middle grades; in the last a large business has been built up. Cotton hose, black and in colors, have sold well. Cotton prints, patterns that went ten years ago from Manchester, still find favor. Germans are unable to assign a good reason for this. My own impression is that it is due to the excellent qualities of the goods. The trade is not confined to bright colors; many of Alsace's soft, quiet patterns are in demand. England sends large quantities of nettings (mosquito), tulles, gauzes and mulls, white cotton shirtings, napkins, towels, linen and cotton handkerchiefs, white drills, gray domestics, gray linen drills, hessians, and sailcloths. Large quantities of colored cottons for shirts, as well as ready-made shirts, are going in. Colored pajamas and various kinds of underwear are imported from England and Germany in about equal quantities. Switzerland sends hammocks (it is a good plan to weave in the Peruvian or Brazilian coat of arms), cords for hammocks, handkerchiefs (especially colored lines, fantastically embroidered imitations of silk handkerchiefs, which are great favorites with the natives in their national dance). The United States sends cotton goods, especially blue drills. France sends corsets, shawls, silk ribbons, cloths, caps, sunshades, etc. There is a good business in hats and ready-made suits, that will wash, for any firm that goes to work in the right way to win the market of Iquitos.

White drill pantaloons are sent from the United States, England, France, and Germany. Much of the trade in this section is done by Hamburg and London houses.

If anyone will work the field, taking care to send catalogues in Spanish and Portuguese, rather than in English, there is no doubt that a fairly profitable business can be built up. Small shipments of samples, with a guaranty that goods will go in equal to or better than samples, is an excellent way to win favor in those countries. At present goods go in every five or six weeks, via the Booth-Iquitos Line, whose boats leave Liverpool, Hamburg, Havre, and Lisbon. Rates should be made "free on board" at one of these ports.

It is in such markets—in fact, in the fields sought by the merchants and manufacturers of this Empire—that the United States should win its greatest success. Here we have to contend with conservatism and prejudice. In South America, in the East, in Africa and Australia, we meet Germany's manufacturers and merchants in markets as open and favorable to our efforts and enterprise as to theirs. It is in such markets that we must seek those openings for our exports made necessary by our rapidly increasing power to produce.

PROJECTED INTEROCEANIC RAILWAY ACROSS SOUTH AMERICA.

[British Board of Trade Journal.]

The subject of constructing a great South American interoceanic railway across the continent from a Brazilian port to the Pacific, crossing the Andes by means of a tunnel, has, according to the Iron Age, for long occupied the attention of the South American republics. The chief obstacle which has hitherto stood in the way of such an enterprise is the difficulty of raising the necessary funds. The technical part has already been examined and found feasible. The former difficulty now seems to be in a fair way of removal, as it is announced that the Governments of Brazil, Peru, Chile, and Bolivia have jointly taken up the project and are disposed to guarantee the interest on the capital engaged in the work.

It is said that the construction of such a railway would take about nine years. The necessary capital is understood to have been offered, and there is reason to believe that as soon as an understanding is reached with Ecuador, the only State which has not yet signified its approval of the scheme, the work will be started. The commercial advantages that would be opened up to the South American countries and to other nations interested in the trade of that continent are obvious, having in view the distance, danger, and high freight rates involved in transportation as at present by way of the Straits of Magellan.

UNITED STATES COAL FOR SOUTH AMERICA.

Consul Mayer, of Buenos Ayres, writes, on December 27, 1898: "It affords me great pleasure to report that for the first time American coal has arrived here in sailing vessels. The American schooners *Mary E. Palmer* and *William B. Palmer*, captains W. H. Haskell and L. McDonald, arrived here from Norfolk, Va., with 4,851 tons of Pocahontas coal. They made the trip in forty-nine days. Both left Norfolk on the same day and, strange as it may seem, both arrived at this port on the same day. This is a new era for American shipping, and it will not be long until Argentina will receive her entire coal supply from the United States."

Consul Furniss writes from Bahia, Brazil, July 14, 1898: "The imports of coal at Bahia in 1897 amounted to 78,000 tons (of 2,240 pounds). Large quantities were taken by the Bahia and San Francisco Railroad and by the Government gas works. All the coal was from Cardiff and Newcastle, the former being used for steam purposes and the latter for gas. No anthracite is imported; bituminous coal is used for all purposes. The average wholesale price is 37s. (\$8.99) per ton. Vessels bringing coal discharge it free of expense to purchaser into lighters. Lighterage costs on an average 3 to 5 milreis (42 to 70 cents) per ton. The duty on coal is $2\frac{1}{4}$ milreis (31½ cents) a ton. There are no coal mines in this consular district."

A CANADIAN REPORT ON AGRICULTURAL MACHINERY IN MEXICO.

[From the British Board of Trade Journal.]

The Board of Trade have received a copy of the report of the Canadian commissioner, appointed by the Canadian government to investigate the condition of trade in Mexico and Central and South America. In that portion relating to Mexico occur the following details concerning the agricultural machinery industry of the country:

A dealer, who has been in that business in Mexico for forty years, states that with regard to plows in Mexico they are most popular if they have but one handle, the natives being used to plowing with a crooked stick, through which a sort of share is inserted. They prefer but one handle because they use but one hand in guiding the plow and the other for prodding the oxen, which are attached to the plow by a yoke lashed about their horns. This dealer says that very often when a two-handled plow is provided the native plowman saws one of them off, and in conformity with this prejudice the small manufacturer of plows in Mexico makes, as a rule, a single-handed affair, which is very roughly finished. The price paid for plows is from six to ten dollars each, Mexican silver; the native production being the cheapest. Simplicity is absolutely essential to any manufactured article which is to be used by the Indians.

Reapers have considerable sale and are largely used on haciendas owned by enterprising Mexicans or foreigners, but binders are considerably too complicated to be used with advantage where labor is so cheap. Agricultural help is obtainable at from 25 to 50 cents per day, according to locality. In the majority of cases irrigation has to be resorted to to raise grain, and this necessitates deep furrows and the growing of grain in clumps, which makes it hard to successfully use a binder. On a ground which have been improved by modern engineers the levels are much more even, and consequently the furrows more shallow and the obstructions to the use of machinery less numerous. In California, where the levels have been carefully made for irrigating purposes, reapers and self-binders are successfully used, and this will be the case in Mexico shortly.

It must be remembered that Mexico is largely a Republic of small communities, each hacienda being almost a municipality by itself. As these large farms fall into the hands of progressive people, more modern methods of agriculture are used and provision is made for the successful utilization of modern machinery. With the progress of ideas, the business of providing agricultural implements of a more or less complicated make will also advance rapidly, and the first dealers in the field making systematic and aggressive efforts will find their machines adopted, and will obtain the full benefit of the conservative nature of Mexican sentiment, which is slow to change from one implement to another. It can be safely asserted that the same impulse prevades all business transactions. When anything is purchased which is satisfactory, not only is the trade-mark considered the only necessary introduction of an article of a correct kind, but the dealer himself will be asked to provide everything further that may be required. Though it may be hard to establish a business here in Mexico, it requires very little exertion to retain it, provided that such business is at all satisfactory. Confidence hardly won is rarely lost among those who have transactions in the Republic.

Reapers sell from \$170 to \$200 each, Mexican silver, without the binding attachment, and the people to whom agricultural implements would ordinarily be sold may be considered as good payers. The debt laws of Mexico are very stringent, and only the owners of land are likely to become purchasers.

In the machinery stores, gang plows of a simple and cheap construction, corn shellers and fodder-chopping machines, force pumps, thrashing machines, and the majority of implements seen in Canada can be found. It is said that English-made thrashing machines are sometimes favored because they do not shake to pieces so quickly, but this prejudice is hardly likely to survive when other countries using thrashing machines have adopted the lighter construction.

Any agricultural labor-saving devices imported into Mexico will be worked by Indian labor, and it must not be forgotten that these Indians are not particularly receptive of economical ideas. It is unlikely that any of the machinery in use on a Canadian farm would be acceptable in Mexico until the implements now in use have been scrutinized carefully, and, to a certain extent, imitated. Native workmen and laborers can be gradually led from the primitive implements now in use to much more valuable and economical appliances; but it is almost impossible to at once advance a strongly prejudiced and illiterate person from the tools which he and his forefathers have used to something which he can not comprehend and does not propose to accept, if by any means he can destroy it, or find an excuse to return to the old method.

While this is true, it should be reiterated that manufacturers who take pains to introduce their implements, and gradually educate the Mexican laborers, will be rewarded by a faithful and remunerative patronage.

The duty on agricultural machinery moved by pedals or levers, etc., is 5 cents (2½d.) per kilogram (gross weight).

POSTAL MONEY-ORDER SERVICE WITH MEXICO.

Under date of February 11, 1899, Consul Jones, of Tuxpan, writes to the State Department:

There is much rejoicing throughout this district—and I have no doubt throughout this entire Republic—over the prospects of a money-order postal service between Mexico and the United States. It will be the means, I think, of introducing many of our goods into these markets. The money-order and parcel-post systems open up such a field in Mexico for the mailing departments of our large stores that it will pay our merchants to cover this field with catalogues printed in Spanish. The possibilities in this line can hardly be overestimated, especially if arrangements to facilitate trade are made with express companies.

The well-to-do families of Mexico have long been anxious for our goods, and only the means of getting them has been lacking.

FREIGHT RATES FROM NEW YORK TO CITY OF MEXICO.

[From Consular Reports, March, 1899.]

MEXICAN COMMERCE AND THE SHARE OF THE PRINCIPAL COUNTRIES THEREIN.

The United States, by reason of proximity, close railway and wire connection, and a growing familiarity with the wants of the Mexican population, now supplies one-half of the imports of Mexico. Consul-General Barlow, in a report to the Department of State, published in the Consular Reports of March, 1899, says that—

In spite of the establishment of factories in Mexico, there was an actual increase of \$1,399,397 in imports during the fiscal year 1897-98, and this in spite of the fact that \$2,600,268 worth of American corn was imported in 1896-97, owing to the partial failure of the corn crop in Mexico, whereas in 1897-98 only \$43,069 worth of this cereal was brought into the country. The increase might therefore be estimated on the basis of normal conditions as nearly \$4,000,000.

Commenting on the fact that other countries gained in their imports into Mexico in 1897-98, he says:

Our exporters are not paying the same attention to the commercial customs of this Republic that is given by manufacturers of other nations, principally England, France, and Germany. The business conditions of Mexico are noteworthy, and it will be of much pecuniary benefit to our merchants to study them. In the first place, there are very few concerns doing business here that have not ample capital to carry out all contracts into which they may enter. Failures are very rare indeed, and when they do occur are carefully investigated by the authorities in the interests of creditors, and any attempts to defraud are severely punished. Book entries are regarded as sacred; all books kept by business houses are known and small stamp taxes paid on them, and thus a sort of surveillance is kept over them by Government authorities. All this tends to keep up a high standard of commercial credit; and, now that the commercial agency of R. G. Dun & Co. has extended its operations to this Republic, exact knowledge of the standing of the business houses here may be obtained.

As the terms of our American merchants are often very rigid, it is hard to reach an agreement, and much trade which by the exercise of a little tact and judgment could be handled by American merchants goes elsewhere. For instance, terms usually offered by European merchants are four to six months' time, whereas American houses often require that the total amount of their invoices be placed in some bank in the United States before the goods are shipped.

With good local agents on the ground familiar with the language and the character of the buyers, the question might be easily settled. The superiority of many kinds of American goods is readily admitted here, and Mexican buyers are desirous of dealing with the United States, and would do so more extensively than at present, if trading facilities were offered them. I do not suggest that the full time offered by other nations be always granted, since we have many goods that this Republic must have, and these, of course, can

be sold practically on our own terms; but I do say that the business methods of Mexico should be carefully studied. Buyers and sellers should acquire mutual confidence, and where that can not be attained no business should be done. A happy medium between extended time and the requiring of a deposit before shipment would seem to be to ship to reliable manufacturers' agents, have them import the goods, and then deliver them and collect and remit therefor according to contract.

A few words as to the value of contracts in Mexico. Once an absolute understanding is had between buyer and seller and the agreement reduced to writing, there is seldom any controversy, as a contract or a preliminary contract (known here as a *minuta*) is regarded as binding, even though the only legal forms required in a "*minuta*" are the affixing of a 50-cent stamp and the depositing of the *minuta* with a notary public, to be reduced to a public deed when one of the interested parties requires it.

EXPORTS. *a*

As to the exports by countries, amounting to \$128,972,749 (\$58,166,719) in 1897-98, \$94,974,616 (\$42,833,552) went to the United States, or 73 per cent of the total amount exported from Mexico, as against 77 per cent in 1896-97.

The increase of \$8,250,000 (\$2,953,500) in volume is very satisfactory, and, in the face of the higher duties imposed by the Dingley tariff, is the more noteworthy; but, as will be seen, the export business of the United States has not kept pace with the increase in the general exports, whereas some other countries have greatly increased their purchases of Mexican goods. For example:

France, which in 1896-97 bought of Mexico but \$1,873,522 (\$670,743), bought in 1897-98 \$5,320,016 (\$1,904,587), an increase of \$3,446,494 (\$1,233,844). Holland, which is reaching out for trade here, increased from \$57,906 (\$20,730) in 1896-97 to \$719,322 (\$257,517)—an increase of \$661,416 (\$236,787). Cuba shows the most notable increase, from \$53,503 (\$19,155) in 1896-97 to \$2,152,544 (\$770,611) in 1897-98. This is due to the fact that Cuba had to have certain Mexican products, and that the advantage in favor of Spain was greatly diminished.

Germany's increase, though large, was not so remarkable, being \$2,578,989 (\$923,278); while the small Kingdom of Belgium about keeps pace with England, since the former increased \$421,765 (\$150,992), whereas the latter, with its position of second only to the United States (though at a great distance), increased only \$495,111 (\$177,249).

IMPORTS.

Imports in 1897-98 were \$43,603,492, against \$42,204,095 in 1896-97. Of this amount about one-half was from the United States, England being second, France third, Germany fourth, and Spain fifth in the list. The imports from the United States in 1897-98 were, according to the figures of the Mexican Government, \$21,490,604; England, \$8,105,696; France, \$5,435,698; Germany, \$4,781,821, and Spain, \$2,039,132; Belgium, \$590,196; Italy, \$186,273; Turkey, \$156,732; India, \$154,115; Austria, \$125,144; Holland, \$103,913; no other country reaching \$100,000.

THE MEXICAN "FREE ZONE" DESCRIBED BY MEXICAN OFFICIALS.

The "Free Zone," a strip of territory 12½ miles wide along the entire northern border of Mexico, into which goods are admitted without payment of the usual tariff charges, is officially described in the following statement, prepared in 1898 by the Mexican Treasury Department, at the request of the United States Treasury Department. The "Free Zone," according to Johnson's Cyclopædia, "was established by the State of Tamaulipas in 1858, and has been extended to the entire northern frontier of Mexico; imports for use in the zone (except cattle) pay only 10 per cent of the ordinary duties; the Mexican authorities claim that this arrangement is necessitated by the retail trade across the frontier."

The official description furnished by the Mexican authorities is as follows:

There is understood by the term "Free Zone" a strip of national territory which, covering all the northern frontier of the Republic in the States of Tamaulipas, Coahuila, Chihuahua, Sonora, and the Territory of Lower California, from the Gulf of Mexico to the Pacific Ocean, extends in a latitudinal direction 20 kilometers (12.42 miles) from the frontier border toward the interior.

It was established in the beginning from Matamoros to Monterey Laredo (to-day Laredo of Tamaulipas) by Col. Ramon Guerra, governor of the State of Tamaulipas, by means of a decree dated the 17th of March, 1858, which was sanctioned by President Juarez the 30th of July, 1861.

The tariff of the 1st of January, 1872, left it in existence, and the tariff of 1885 caused its extension to all the frontier. The general ordinance of custom-houses of 1887, as well as that of 1891, which is now in force, preserved it, although with modifications of importance, especially as regards collection of duties.

DUTIES LEVIED IN THE FREE ZONE.

The franchise granted the Free Zone consisted, in the beginning, in not levying any duty upon imported articles; afterwards, however, some small duties, purely local, were established, and the ordinance of 1887 established as a fixed basis 3 per cent on the value of the duties according to tariff—a basis which was raised to 10 per cent by the ordinance of 1891. By subsequent decrees the duties were raised 1½ per cent for the municipality and 7 per cent for stamps for internal revenue, the result of all this being that the merchandise introduced into the Free Zone from abroad now paid 18½ per cent upon the importation duties according to tariff.

For the better comprehension of this explanation, there is here given an example of the duties paid by a certain article, according to its destination, either to the interior of the country or to the Free Zone.

a The Mexican customs estimate the value of imports in gold and of exports in silver.

Let us suppose a bale of cotton weighs 100 kilograms (220.46 pounds). If destined for the interior of the country, it will pay duties as follows:

DESCRIPTION.	Duties.	
	<i>Dollars.</i>	<i>Dollars.</i>
100 kilograms (220.46 pounds) at 7 cents (3 cents).....	7.00	<i>a</i> 3.10
2 per cent for harbor works.....	.14	.06
1½ per cent (municipal).....	.10	.04
7 per cent (revenue stamps).....	.49	.22
Total.....	7.73	3.42

a The reductions in this report are made on the basis of the valuation of the Mexican dollar given April 1, 1898, by the Director of the United States Mint—*i. e.*, \$1 Mexican = 44.4 cents.

If that bale is destined to the Free Zone, it must pay—

DESCRIPTION.	Duties.	
	<i>Dollars.</i>	<i>Dollars.</i>
10 per cent on \$7.....	0.70	0.30
1½ per cent on \$7 (municipal).....	.10	.05
7 per cent on \$7 (stamps).....	.49	.32
Total.....	1.29	.67

If this same bale, after having been imported to the Free Zone, is shipped to the interior of the country, it must pay, in addition to the above—

DESCRIPTION.	Duties.	
	<i>Dollars.</i>	<i>Dollars.</i>
90 per cent on \$7 (\$3.10).....	6.30	2.79
2 per cent for harbor works.....	.14	.06
Total.....	6.44	2.85

which is equal to the amount charged for importation of the bale directly to the interior (\$7.73=\$3.42).

It must be noticed that not all the merchandise that enters through the custom-houses of the north is destined for the Free Zone, and that much that is primarily imported for consumption there is afterwards shipped to the interior.

The greater part of the merchandise that enters through Laredo, Tamaulipas, Porfirio Diaz (Eagle Pass), City of Juarez (El Paso, Tex.), and Nogales, Sonora, pays at once the entire duties and is forwarded immediately to the interior.

The custom-house of Matamoros has little importation, and those of Guerrero, Camargo, Mier, Boquillas, Lasabe, Tiguana, and La Morita have practically none.

The greater part of the goods imported by these last is consumed by the inhabitants of the towns named and their jurisdictions; and all are United States goods, such as hams, potatoes, lard, butter, beer, matches, coarse cloth material, etc.

POPULATION OF THE FREE ZONE.

The principal cities found in the Free Zone are Matamoros, Camargo, Mier, Guerrero, Laredo City, Porfirio Diaz (Piedras Negras), City of Juarez (Paso del Norte), and Nogales. The others are small towns which have little commercial importance. The total population of the Free Zone could hardly be estimated to be 80,000 or 100,000 people.

LOSSES TO MEXICAN TREASURY DUE TO THE FREE ZONE.

As the records of the frontier custom-houses of the north make no distinction in the duties, those for the Free Zone as well as those for the interior appearing in the same classification, it is impossible to know exactly what the treasury loses by the 90 per cent rebate on the duties of the merchandise destined for consumption in the Free Zone; but, admitting, as an exaggerated estimate, that the total consumption of the Free Zone represents in duties \$400,000 (\$177,600) a year, with the 10 per cent charge on this amount, the average annual loss would be \$365,000 (\$162,060).

COST OF GUARDING.

The institution of the Free Zone obliges the Mexican Government, in order to prevent the introduction clandestinely into the interior of merchandise proceeding therefrom, to maintain a body of fiscal guards at an annual expense of \$562,525.95 (\$249,762). The guards of the custom-houses must not be reckoned in this account, for these, with or without the Free Zone, are necessary to prevent the smuggling which would be carried on from the United States, and which is even now done.

In case of abolishing the Free Zone it would not be possible to completely suppress the fiscal guards; lessened in number and with a distinct organization, they would have to be maintained, especially since in case of their abolition the entire duties would be charged (that is to say, 90 per cent more than is now levied), and this would be inducement enough to provoke attempts at smuggling.

This body of guards, fiscal as well as administrative, supplies the place of an interior custom-house (although it does not levy duties), as it reviews in certain instances the merchandise shipped through the frontier custom-houses, and, in a military capacity, guards the roads leading to and from the frontier, to prevent smuggling. It has a system of fixed sections situated at convenient loca-

tions between the Gulf of Mexico and the Pacific, and of flying detachments continually patrolling the strip of territory named. Experience has demonstrated the usefulness of the body, for instances of smuggling by wagons, carts, or animals, can be said to no longer exist.

INDUSTRIES.

In the Free Zone there are no industries worth mentioning, nor is it possible to establish any, for the general ordinance of the custom-house permits the introduction to the interior of the country of industrial products manufactured in the Free Zone only on payment of the regular duties, which are equal to those levied on foreign goods of the same kind. Exportation to the United States of America would be difficult on account of its protective tariff, and the consumption in the Free Zone would not be sufficient to sustain industrial establishments of any importance, especially as not a single railroad exists, and transportation of merchandise is carried on in certain parts over difficult roads by means of the rudimentary system of ox carts.

AMOUNT OF GOODS SHIPPED TO THE FREE ZONE AND IMPORTED FROM IT.

I will not mention the merchandise coming from the United States of America, but will only consider that from Europe, Asia, etc. According to statistics of the frontier custom-houses, the duties on importations into the Free Zone of European merchandise, etc., during the two years of 1895-96 and 1896-97 were:

CUSTOM-HOUSE.	Amount of duties, calculated as a whole.	
	Dollars.	Dollars.
Mier.....		
Guerrero.....		
Boquillas.....		
Tiguana.....		
La Morita.....		
Camargo.....		
Laredo, Tamaulipas.....	162,326	116,473
Ciudad Juarez.....	100,774	44,744
Ciudad Porfirio Diaz.....	80,914	36,126
Nogales.....	83,182	36,933
Matamoros.....	80,643	35,805
Total in two years.....	607,839	269,881
Average per year.....	303,919	134,940

Of this amount at least 33½ per cent can be calculated to have been shipped later into the interior, paying the regular duties; this would amount to \$101,306.50 (\$44,980), leaving as a balance consumed in the Free Zone \$202,613 (\$89,960).

OPINIONS REGARDING THE FREE ZONE.

Many distinguished financiers and eminent statesmen are opposed to the Free Zone, but all recognize the fact that, on account of existing circumstances in the northern frontier, its sparse population, without resources in agriculture, industry, or mining, the privilege could not be abolished without compensation, and the problem lies in choosing some other advantage without prejudice to the rest of the country.

The attitude of merchants in the interior is, in general, hostile, because they consider it a privilege granted to only a certain portion of the country. Merchants very far removed from the frontier, as those of San Luis Potosi, Guadalajara, and Mexico, do not consider it injurious. Those who are near, as Monterey, Chihuahua, etc., do not fear its competition, but they complain of it for the reason that they can not enjoy the liberty of distributing their goods without documents and without fiscal inspection, as in the rest of the country. In reality the jurisdiction of the fiscal guard extends to all the States of Tamaulipas, Nuevo Leon, Coahuila, Chihuahua, Sonora, and part of Lower California, and in this territory can be shipped no merchandise, according to law, unless the merchant gives legal proof that his goods have paid the just duties and asks permission for every shipment.

SMUGGLING.

Under this title there are two divisions to be made, as follows: Smuggling to the interior of the Republic and smuggling to the United States of America. The first was at one time of importance, since it was practiced on a large scale. Bands of smugglers, resorting at times to violence, conducted merchandise to the interior; but since the Republic entered the period of peace the Government has been able to take measures to end this illegal traffic. The custom-houses, which formerly scarcely produced enough to pay the employees, now render from \$4,000,000 to \$5,000,000 annually from import duties.

Smuggling from Mexico to the United States of America has never been practiced to any great extent. It consists in petty individual traffic. Smuggling is not only carried on in foreign goods, but also in Mexican products, such as mescal (fire water from the maguey or agave), and tobacco worked into cigarettes, which, on account of having a very high price in the United States of America, offers a great temptation to clandestine traffic. This individual smuggling will exist forever, Free Zone or no Free Zone, as experience has demonstrated that it is very difficult to extirpate it. But it is not carried on in the exaggerated scale that those opposed to the Free Zone claim, for, taking into account the amount of European importations to the Free Zone, the amount consumed in the Free Zone, and that introduced into the interior of Mexico, it is easily seen that the smuggling is relatively insignificant. On the other hand, it must be conceded that the damage is reciprocal. Being, as it is, an illegal traffic, naturally there are no statistics; but at mere sight, and taking into consideration the condition of the frontier, it is probable that smuggling on a small scale from the United States into Mexico (consisting of merchandise for consumption) may be greater than that from Mexico to the United States, which consist of goods of a certain price which only the rich can buy.

JOSÉ ROSENBERGER,
Chief Clerk, First Section, Treasury Department (Department of Customs).

THE TRADE OF PARA AND THE GREAT AMAZON VALLEY.

Para, a city of 65,000 inhabitants, located near the mouth of the great Amazon, and controlling the trade of its enormous valley, is, unlike the other cities of the eastern coast of South America, nearer to the great commercial centers of the United States than to those of Europe. This fact adds especial interest to a statement from Consul Kennedy, published in *Commercial Relations for 1898-99*, in which he says:

The city of Para, situated only about 100 miles from the mouth of the Amazon River, is the key to an enormous stretch of wealthy country; and indications are that it will become the Chicago of South America. Over 150 steamers are employed on the Amazon and its tributaries (about one-third of these vessels belonging to a British company), and the number will be increased materially before the end of the year. The internal communication afforded by the Amazon and its branches is so complete that railroad and terrestrial means of transportation are not needed, except to connect parts of rivers obstructed by rapids. Commerce at Para has developed enormously within the past few years; the custom-house is overwhelmed with work, and there are not at present enough stores to receive the goods as they arrive, although large additions have recently been made. Both lines of steamships running between Para and New York are increasing the number of their ships, as they are entirely unable to carry the heavy freight billed for this section of the country. A short time ago, the two lines made one trip each a month; later a bimonthly service was established; now three trips are made, and I am reliably informed that on the 1st of next January weekly trips will be made. No better evidence could be brought to show the greatly increased demand for United States goods. I learn from the captain of every vessel coming from New York that it is utterly impossible for any one of the steamers leaving that port to clear the freight billed for Para and the Amazon. This statement is gratifying in the extreme, though it is to be regretted that these goods can not be hauled in American ships.

The freight rate from Para to New York is 25 cents per cubic foot, or, as I am informed by merchants, about 17 per cent less than from here to Europe.

In the absence of printed statistics it will be impossible to furnish an absolutely correct list of imports. American trade with Brazil, however, has increased tremendously of late years, and the broad expansion in demand can not be regarded as other than encouraging.

The majority of merchants here require from ninety to one hundred and fifty days' credit; some, of course, only ask for half of such time. Germans stand ready to meet all requirements and competition. Our salesmen must expect to encounter sharp competition. A study of conditions is absolutely necessary.

FLOUR AND FOOD PRODUCTS.

We furnish all the flour to this community, and I am proud to say there is no room for improvement in this particular article. We also supply the bulk of the hams, bacon, lard, and other articles belonging to this class.

BOOTS AND SHOES.

United States boots and especially shoes are recently securing quite a foothold. German-American agents have just received upward of 9,000 pairs, and one advises me that the attractive finish and superior workmanship enabled him to dispose of all of his consignment, which he had had made specially for this market by a Boston house. This same gentleman has gone to Boston to lay in a much larger line of shoes. He intends to open an American shoe house, confining himself entirely to these goods.

MACHINERY.

There is a broad field for expansion in machinery. This line of industry has made rapid strides in the right direction during the past six months, and would increase much more if our manufacturers would take advantage of this opening. It is my opinion, after a careful canvass, that this trade could be indefinitely increased if a thoroughly competent agent were sent to the spot, one with long experience and practical knowledge, who could explain any article he represented, and who knew how to exhibit his goods to advantage. A rich harvest will follow, provided the proper methods are adopted for introducing these articles. Satisfactory results, however, can not be brought by correspondence; an energetic man must be sent—one who, if he fails at the beginning, will not become discouraged.

HARDWARE AND CUTLERY.

There is an excellent opportunity for trade in this line. Every hardware establishment in Para carries some goods manufactured in the United States. Among other articles, I notice the famous Colt's and Winchester repeating rifles, together with many other makes of less reputation. It is to be regretted that, in the absence of statistics, I can not show exactly what proportion of exports each country sends to this corner of the world.

I am convinced that builders' materials could easily be marketed here; also, agricultural implements, such as hoes, shovels, hayforks, spades, hatchets, and axes. Yale locks, hinges, fastenings, and all kinds of cartridges find a ready sale. A general line of household utensils, in my judgment, would quickly get a foothold here, and a number of other articles which belong to this group.

JEWELRY, WATCHES, SPECTACLES, ETC.

To surrender this rich field to our German competitors without even a struggle would be foolish. I have devoted considerable time to this little group of specialties, and I would make the following recommendations:

For spectacles or eyeglasses I observe that a metal known as "alloy" is rapidly gaining favor; in fact, a majority of the jewelers here advise me that it will be difficult to market any other kind.

I am certain that a market could be created here for a cheap line of clocks. Inexpensive watches would sell readily; say, for instance, one selling for from \$4.50 to \$7 or as high as \$9. Of this class, a steamship load can be disposed of here and up the Amazon. One would also have no difficulty in disposing of rolled-gold or cheap plated jewelry.

HIGH-CLASS CONFECTIONERY.

An excellent market can be created here for this class of goods. There is not an establishment in Para dealing in confectionery. A choice line of fancy or mixed candies, together with a general assortment of other articles that are usually carried by similar houses, including, of course, a soda fountain and ice-cream freezer, would probably meet with success.

SEWING AND TYPEWRITING MACHINES.

I believe that not a sewing machine can be found within the limits of this city, or up the Amazon Valley, except of United States manufacture. I have made a careful canvass, and discovered that almost every tailor and shoemaker in the city of Para, as well as a large majority of private residences, owns a sewing machine manufactured in the United States; and it is safe to say that the entire Upper Amazon is amply supplied with American machines. In fact, I have not been able to trace any others.

There are very few typewriting machines in this section of country that are not of American make, and there is a rapidly increasing demand for our machines. This line of goods is slowly but surely finding its way into offices and commercial houses; there is, however, ample room for expansion in this specialty. A rich harvest might be reaped within a very short time, provided a shrewd and experienced agent promptly entered the field. German agents are scattered all over this country, and they are constantly on the lookout for openings of every nature, never allowing a chance to escape. The sooner these goods are placed on the market the more satisfactory the results will be.

BICYCLES.

The one marked development in this district within the past six months, I hear, has been in the bicycle trade. The United States machine was brought into notice in the following way: It appears that for some time past the adoption of a bicycle by the entire police force has been rapidly gaining favor, and, in consequence thereof, a recent special session of the board was called, with a view to putting the question to a test vote. After mature reflection the officers of said board decided to recommend the adoption of the bicycle. A committee was appointed, consisting of three experts, with instructions to carefully canvass the Para market with a view to securing the most substantial and generally superior wheel for the least money. The committee advised, in the strongest terms, a wheel made in the United States, adding that the latter clearly outclassed any other in the market. The wheels were forthwith adopted. The gratifying result was that the public, appreciating the test, have had their faith in our bicycles greatly increased. The favorable decision of the committee will prove an exceptionally valuable card to American manufacturers in other lines as well as in this. The future outlook for this particular industry can not be regarded as other than encouraging.

DRY GOODS, HOSIERY, AND NOTIONS.

As in other cases, I find it impossible to obtain exact information as to what extent we supply this line of trade; yet I feel confident that we have a fair share. As regards cotton goods of the coarser and heavier quality, especially in blue, the work of American mills is preferred and has almost wholly supplanted that from the Manchester mills, or from other parts of Europe; and the same is true of spool and machine thread, twine, and cordage. The trade in hosiery is very much divided, every country in Europe, as well as the United States, having a share. A line of flashy silk handkerchiefs would sell, I believe, faster than anything I could suggest.

The principal importers of coal are the Amazon Steam Navigation Company, A. Bernard & Co., the Para Gas Company, Booth & Co., Silva Volhote & Co., and Companhia Urbana (Electric Light Company). There is but little coal brought here from the United States, and it is my opinion that proper steps are yet to be taken in order to create a demand. The amount of coal in port at present is roughly estimated at more than five times as much as was ever known to be in storage in Para before. The English Government bought unusually large quantities of coal during the late war. Up to this writing our coal has failed to secure a substantial foothold. I believe exports from the United States could be developed.

DRUGS, MEDICINES, ETC.

The terms of credit given by European houses are so much easier that drug dealers prefer to place orders there. They also claim that the packing is more satisfactory. Freights being cheaper to New York than to Europe, there is no reason why, by adopting the proper methods, our manufacturers should not succeed in getting a substantial foothold here in the distribution of various drugs; for instance, cures for chills and fever, rheumatism, neuralgia, headaches, gout, and other complaints common in the tropical climates. It is positively necessary, however, to personally study the market. It is important to state that during my term of office, notwithstanding the many drummers representing American houses who have touched here, not one could speak the Portuguese language.

LUMBER AND DOOR SASHES.

In this specialty the United States has the market. All the material for manufacturing boxes to hold the rubber, nuts, etc., exported comes from the United States. I hear that a demand has recently arisen for window frames, doors, and a number of articles of this class. Whenever one branch of industry begins to develop I find, upon investigation, that it is due in almost every instance to energy and perseverance on the part of the representative of such industry.

READY-MADE CLOTHING.

There is no such thing as an establishment in Para carrying ready-made clothing. Everything of the kind is made to order. It would seem, however, that such goods could easily find a market. The cheapest line of clothing, together with calicoes, domestics, and fancy goods, should be sent.

UNITED STATES GOODS IN BRAZIL

[Consul Clark, of Pernambuco, in Commercial Relations, 1897-98.]

If properly handled, United States goods will constitute a large share of the imports into Brazil. There are many openings for textiles, hardware, nails, etc. My attention has been called to the necessity of making hinges of a style desired and used in this country. Agricultural machinery should be brought here and introduced by competent people. Our bicycles are being introduced, and all prefer them, though the roads are in such bad condition that there can be no extensive use in this district. Small hardware is in demand, but must be made to suit the trade and well put up in proper packages.

This is an opportune time for the introduction of United States textiles, dealers preferring them to all others, even on thirty days' credit as against four months from Europe. A concession in this direction would work well.

Our boots and shoes are in demand, particularly for women and children. There is a good opportunity for the introduction of our files and saws, which come here now through English houses.

The chance for American coal was never better, but it should be screened. Spruce and hard-pine lumber, suitable for packing cases and boxes, is in great demand.

The extension of a parcel-post system to this country would be a great boon and open up new lines of trade. There should be increased care in attending to orders and having them properly packed so that the goods will not arrive damaged. The contents and weight of each package should be carefully noted and goods packed in as light packages as possible, as duties are paid on the gross weight.

Trade is best managed by having experienced commercial travelers, who can speak the Portuguese language, make trips about six months apart, and by paying strict attention to their orders and directions. Usually "something just as good or similar" will not please this people. The lack of a very small and apparently insignificant part of a machine renders the whole thing useless, and sometimes three to six months are necessary to replace it. These things should be kept constantly in mind, and the greatest care exercised to see that each shipment is complete in itself.

A WAREHOUSE FOR UNITED STATES GOODS WANTED IN BRAZIL.

[From the Rio Janeiro News.]

Commercial travelers are coming and going, commissions have visited us to investigate the conditions of trade in this country, and thousands of letters have been received on the subject of trade relations. And at times so urgent have been the inquiries that it has seemed but a question of days before the market would be flooded with American goods. But the days slipped by and the effort soon exhausted itself, the result being that no impression whatever had been made upon the market.

In our discussions with the representatives of American manufacturers we have advised their cooperation in establishing a large retail establishment in this city, under the management of trustworthy and experienced men, which should cover the sale of a wide variety of manufactured goods. The prime object should be to place these manufactures within the reach of consumers. Established commercial houses will be very slow to deal in goods unknown to their customers, but as soon as a demand is created they will readily fall in line. It should, therefore, be the object of such a general store to introduce goods and create a demand for them; and to do this, it should be made as attractive as possible and should include the widest possible variety of articles. We have but little faith in commercial travelers and expositions as a means for introducing manufactured goods, for they are transitory in effect and disappointing to those who wish to continue dealing in certain articles. The better method is the one we have recommended—the opening of a permanent retail establishment for the sale of a wide variety of manufactured goods. It may be provided with a wholesale department, but its principal object should be to introduce the goods to consumers.

We do not understand that a very large cash capital would be required, for the shareholders would be the manufacturers themselves and their principal investments would consist of manufactured goods. And the profits would be derived not so much from this pioneer establishment (which should be more than self-supporting), but from the wider demand for goods in a new market through the regular trade.

COFFEE AND RUBBER EXPORTS AND THEIR RELATION TO THE COMMERCE OF BRAZIL.

The following review of the coffee and rubber export trade of Brazil is republished from the Brazilian Review of the Bureau of Foreign Commerce of the State Department.

The relative value of coffee exports and of imported goods since 1894 is, in round numbers, as follows:

YEAR.	Coffee exports.		Imports.		Proportion of coffee.
	£	Dollars.	£	Dollars.	Per cent.
1894	24,000,000	116,788,000	33,677,000	163,889,121	71.3
1895	23,000,000	111,929,300	33,325,000	162,176,812	69
1896	19,000,000	92,463,500	31,508,000	153,333,682	60.3
1897	19,000,000	92,463,500	25,775,000	125,433,478	73.7
1898	14,000,000	68,131,000	23,000,000	111,929,300	60.9

As is shown by the above table, the normal percentages of the value of coffee to imports appear to be about 70 per cent—that is, that coffee alone should be sufficient to pay at least 70 per cent of imports. In 1895 the proportion remained about the same; in 1896, in consequence of falling prices of coffee and insufficient reduction of imports, the proportion fell to only 60 per cent; in 1897, in spite of much lower prices, the greater quantity maintained the value of coffee about the same as in 1896, while imports fell heavily, in consequence of which the percentage rose to 73.7 per cent; while in 1898, if our anticipations be correct, the value of coffee will represent not more than 60.9 per cent of imports, and is therefore considerably below the normal rate of 70 per cent. In other words, we are still importing much more than we can afford and living, in fact, on credit or on the surplus that the funding operation has afforded.

As the value of coffee falls that of imports must decline, unless there is some compensation of another kind. Certainly the suspension of the service of the foreign debt is such a compensation, and has in a way interrupted the natural process of balancing our obligations and assets; but the fact remains evident and indisputable that even with the large reduction imports have already undergone they are still in excess of the true purchasing power of the country.

Exports to Brazil have fallen off since 1893 from every one of the principal countries with the single exception of the United States. The reduction is as follows: Great Britain, 18.5 per cent; France, 28.6 per cent; Hamburg, 21.2 per cent; Belgium, 53.5 per cent; Argentine Republic, 11.1 per cent; Uruguay, 17.8 per cent; and Portugal, 16.7 per cent. The only increase was that of 13.4 per cent for the United States. The greatest reduction was in exports from Belgium, of 53 per cent.

That the falling off is not due solely to high tariffs is proved by the fact that, in spite of the reduction of the tariff, the value of imports continues to decline. Naturally it must adjust itself to the purchasing power of the country. If our principal medium of exchange—coffee—has within a few years experienced a fall of 40 per cent in value, how is it possible to expect that the value of imports can continue unaltered?

For the year 1897 the total value of all the merchandise imported by the eight leading countries given above from Brazil amounted to 53,638,544 milreis gold (\$29,286,645), exclusive of coffee and rubber, the real c. i. f. value of which, for which the country is creditor, being 44,434,542 milreis gold (\$24,261,260), equivalent to £4,998,885, or, say, in round numbers £5,000,000—not a very extravagant valuation when it is considered that it includes the value of all exports of cocoa, hides, and saladero produce, herva matte (which almost reaches a million), tobacco, sugar, minerals, etc.

The years 1897 and 1898 show the following results:

ARTICLES.	1897		1898	
	£.	Dollars.	£.	Dollars.
Coffee exported	18,500,000	90,030,250	14,000,000	68,131,000
Rubber exported	7,600,000	36,985,400	8,000,000	38,932,000
Other products	5,000,000	24,332,500	5,000,000	24,332,500

Summing up, we now perceive that the value of imports and exports for 1897 was:

DESCRIPTION.	Value.	
	£.	Dollars.
Imports	25,774,885	125,433,478
Exports	31,100,000	151,348,150
Balance in favor of our trade	5,325,115	25,914,672

For 1898 we estimate:

DESCRIPTION.	Value.	
	£.	Dollars.
Imports	22,000,000	107,063,000
Exports	27,000,000	131,395,500
Balance available	5,000,000	24,332,500

EUROPEAN COMPETITION FOR TRADE IN URUGUAY.

[From British Board of Trade Journal.]

In a report to the foreign office by Mr. A. Grenfell, H. M. consul at Montevideo (Annual Series, 202), some interesting information is given as to the origin of the goods imported from foreign countries into Uruguay. Mr. Grenfell states that much has been said of the want of enterprise and the proper study of the markets wherein the British merchant has his dealings, but such an accusation can not be brought with justice against those who carry on business and represent British commerce in Uruguay. The large percentage of the whole import trade of the country would be sufficient to refute such a charge on the face of it. It would be well to bear in mind that the competition which British commerce has to struggle against at present is much greater now than it was some years ago. Formerly the Italians were not so numerous as they are at present (forming, perhaps, half the population of Uruguay), nor were there any mercantile houses of importance, as there are now, which supply the wants of their fellow-countrymen, as well as those of the native population, with certain cheap articles which the British merchant probably finds a difficulty in providing. Germany closely studies the market and imitates what she thinks she can sell under the name of British-made goods, although of an inferior quality and price.

Great Britain stands alone in the imports of sweet biscuits, tea, oilskins, cloth and carpets, cotton drawers, soda, and jute, and almost alone in canvas bags, iron safes, portmanteaus, window glass, and tin and zinc plates. First also in the imports of sugar, kerssemeres, baize and cotton stuffs, mixed woolens, saddlery and harness, felt and silk hats, cotton and linen handkerchiefs, woollen quiltings and woollen rugs, prepared sheepskins, agricultural tools (except scythes), thrashing machines, spades and picks, string and thread, linseed and machine oils, iron bars and plates, and ironmongery. In some branches of import, however, Great Britain is not represented at all, or to a very slight extent, such as sheet glass, which comes entirely from Germany and Belgium, and starch, of which Germany supplies 50 per cent and Belgium 25 per cent.

In some other articles German traders have outstripped British ones. Such is the case with linen shirtings, which come nearly all from Germany, and hardly any from Great Britain, and also with mixed woollen and cotton ponchos (cloaks), an article much in use by the lower classes of Uruguay, and in the supply of which Great Britain has given way to Germany. Germany is now also first in the supply of linen collars, cuffs, and socks, sulphates and carbonates of potash, wire for fencing purposes, printing paper, and cotton quiltings.

On the whole, Great Britain holds the prominent position she has hitherto held as regards the imports, for out of a total of £5,431,931 she has contributed no less than £1,548,377, or 28 per cent of the whole.

The most formidable European rival that Great Britain has in the import trade is Germany, which imports £585,168; France comes next with £529,741; then Italy with £485,816.

ARGENTINE IMPORTS.

SHOWING THE CHIEF SOURCE OF SUPPLY IN THE PRINCIPAL ARTICLES IMPORTED INTO THE ARGENTINE REPUBLIC IN 1895.

AN OFFICIAL REPORT ON BRITISH TRADE IN CHILE AND ARGENTINA.

[From British Board of Trade Journal.]

Mr. T. Worthington, the special commissioner appointed by the Board of Trade to inquire into and report upon the conditions and prospects of British trade in South America, has prepared a series of reports upon these subjects, dealing with Chile and Argentina. The objects of Mr. Worthington's inquiry were to determine whether any, and if so, what, causes have brought about in any branch of trade a diminished demand for articles of British produce or manufacture, either absolutely or relatively to the demand for similar articles produced in other countries, and to ascertain in what directions and under what conditions a demand for British goods might be created or increased.

In the first of his reports, that dealing with Chile, he gives a table showing in millions of dollars the total amount of merchandise cleared from bond from the principal manufacturing countries for consumption at all Chilean ports during each of the years 1887 to 1896. This table is as follows, and, as the Chilean custom-house statistics are fairly complete, it may be taken as affording a fairly correct indication of the origin of the goods, at least as regards British merchandise. Belgian and other continental goods are largely mixed with German in the statistics.

YEARS.	Great Britain.	Germany.	United States.	France.
	<i>Million dollars.</i>	<i>Million dollars.</i>	<i>Million dollars.</i>	<i>Million dollars.</i>
1887.....	20.4	11.6	3.2	5.5
1888.....	26.3	14.0	3.1	6.1
1889.....	27.9	14.8	3.8	6.5
1890.....	29.5	15.7	5.2	6.8
1891.....	27.8	12.1	4.1	4.9
1892.....	34.1	21.0	4.6	6.7
1893.....	30.8	17.0	4.5	4.1
1894.....	25.5	12.3	3.7	2.3
1895.....	32.0	17.3	4.5	1.6
1896.....	30.2	20.1	6.8	2.8

As regards the reasons assigned by Mr. Worthington for the falling off in the demand for British goods, these are stated to be the difficulty often experienced in inducing manufacturers in this country (*a*) to take up a new pattern or design on a small order, (*b*) to make qualities very much lower than they have been accustomed to, (*c*) to make a low quality with a finish and get-up such as they might think only belonged to a higher class, (*d*) to send samples prepared in a sufficiently attractive form, and (*e*) generally to attend to minutiae which might appear to them unimportant, but which may be very important as affecting the sale of goods in Chile.

Mr. Worthington makes a number of suggestions for increasing British trade, and emphasizes the necessity for cheaper goods and cheaper freights. In connection with the former, he quotes the remark of a leading banker in Chile, who observed: "Chile is a poor country, and a poor country will always buy the cheapest goods. Cheapness is the first consideration. There is no use to tell a man, 'This piece of cloth or that saucepan is a little dearer than that other piece or that other saucepan, but it will last double the time. He has only the money to buy the cheap one, and the cheap one he will have.'"

This applies all through, even to higher-class articles, and the buyer of a piece of cheap fancy goods consoles himself with the idea that the better and more expensive piece would be out of fashion before the cheap one is worn out, whilst the buyer of a cheap light threshing machine, for example, thinks that by the time it wears out something better may be invented which will render the high-priced long-lasting article obsolete. Cheapness is the first desideratum.

The Chilean was accustomed years ago to buy his European goods with what was to him the same dollar as it is now. He wants the same piece of cloth or the same saucepan for a dollar; but the dollar is only 1s. 6d., instead of, say 3s. Therefore the piece of cloth or the saucepan must be made proportionately cheaper. Quality must go.

As regards Argentina, the impression appears to be there that the British manufacturer is doing too well, and is too full of orders to care for making changes, which, perhaps, involve expense and alteration of plant to a greater or less extent; whereas, when anything is asked for in Germany or Austria it is promptly made, and, if not quite what is wanted, is altered as required. There are many articles which are made in one form or another in Great Britain, but which do not reach the Argentine market at present; or, if they do, only in comparatively small quantities. In not a few cases the article, identical in quality, is cheaper to manufacture on the Continent; but in many others it appears, from Mr. Worthington's investigations, that the British manufacturers have lost the trade, in greater or less measure, by failing promptly to comply with the information as to changes in quality, make, or "get-up," etc., which may have been conveyed to them.

PACKING OF GOODS FOR CHILE.

Consul Dobbs writes from Valparaiso, December 21, 1896: I have the honor to report the following on the subject of packing American goods: Many American manufacturers still do not seem to realize the harm they are doing themselves and American trade generally by putting up their goods in too slight packages. Shirts, soap, toilet articles, and many kinds of canned goods, just exactly the packages which offer most temptation, often come in very thin boxes, without any protection in the way of wire or sheet-iron bands, nailed with short, wire nails, easily drawn, and the Chilean longshoreman or lighterman, expert in the use of the short, strong knife he carries, often makes a nice plunder right under the eyes of the officers of the steamers. Then, again, in heavier articles, which offer no temptation to theft, the cases are not strong enough to withstand the very rough handling they receive. The peon likes to see a good smash, and not only handles the cases roughly, but, if he is not watched, will deliberately drop a case in such a way as to smash it, just to see it break, and with the same enjoyment that a small boy throws stones through a window. Whenever possible, packing should be done in such a manner that the package could not be broken open by ordinary means or by being dropped. A case in point occurred the other day. A lot of miscellaneous bronze and brass repairs for mining machinery came in what was a little stronger than a cracker box. It broke open in the ship's hold, and certainly many small parts were lost, probably some of them of vital importance. A peon was detected in carrying off some small castings in his bundle, not that they were of any use to him, but simply apparently for the sake of stealing. A prominent Chilean importer of American goods said to me the other day: "If American manufacturers only knew how to pack goods as well as they know how to make them, American trade in South America would very soon make a better comparison with English and German trade than it does to-day."

BRITISH AND GERMAN COTTON TEXTILES IN CHILE.

[British Board of Trade Journal.]

The total value of the imports of cotton textiles into Chile in the year 1896 was £1,346,334, or £60,619 less than in 1895. Of the total amount Great Britain contributed £975,396, or £88,150 less than in 1895, and Germany comes next with £295,126, or £11,702 less than in 1895, the proportions of the trade obtained by the two countries being respectively 72.44 and 21.92 per cent. The proportions assigned to the other countries are: United States, 3.22 per cent; France, 2.32 per cent; Belgium, 0.04 per cent; and Italy, 0.03 per cent; but both France and the United States more than doubled their trade of the previous year. Where Great Britain chiefly lost ground was in gray drills, white shirtings, cotton prints, domestics and Osnaburgs, and it is to be noted that the United States increased their trade in every one of these articles. The competition from that quarter, however, is not alarmingly serious, as may be seen from the small proportion of the total trade obtained by the United States. The article in which their competition is chiefly felt is in gray drills. In 1895 the values of the shipments of this article from Great Britain and the United States were, respectively, £50,019 and £11,734, while in 1896 the corresponding figures were £30,168 from Great Britain and £15,260 from the United States. As regards Germany, there is no doubt that she is making progress in this branch of trade at the expense of Great Britain, but the fact can not be considered surprising in view of the very large proportion of the trade in British hands. The Germans and German firms in Chile are more numerous than the British, and, notwithstanding this fact, the United Kingdom has still nearly three-quarters of the whole cotton textile trade. The English consul writes as follows: "In no branch of it can they be said to be driving us from the field, and in one or two instances, e. g., cotton drills and cotton handkerchiefs, we have made very distinct advance at their expense. In the class of goods in which the British experienced a diminution of trade in 1896, such as white shirtings, cotton prints, and domestics, the decrease in the German trade was far greater in proportion. In sewing cotton they can make no headway against us, and the business is tending to become a British monopoly."

COMMERCIAL TRAVELERS IN PERU.

[British Board of Trade Journal.]

Her Majesty's consul at Callao reports that the Lima merchants object to commercial travelers competing with them on what they consider unequal terms, the former being put to great expense in keeping up their offices and houses, while the latter turn their apartments at hotels and inns into show rooms at a trifling expense. Steps are being taken in order to induce the Government to compel all commercial travelers to take out licenses. The matter has been laid before the Lima Chamber of Commerce, which proposes that the cost of the license should be 500 soles (£50) for a period of six months, renewable at the end of each period. In case of infraction double that amount is to be exacted, one-third of which will be paid to the informer.

In the south of Peru every facility appears to be given to such travelers. They are allowed to enter with their samples on presenting, through a responsible agent, to the custom-house an official request to pass so many packages of samples. These are examined and valued by the officer named, and then a bond is presented by the agent, who undertakes to pay the amount of the valuation of any of the samples that may not be reshipped within the term specified, generally ninety days; this process will cost the commercial traveler from 10 shillings to £1, according to the number of packages he brings, and he is then free to go where he likes with his samples without being obliged to give an account of them in any other part of the interior he may wish to visit. Of course, the responsible local agents, before giving the bond to the custom-house, will satisfy themselves as to the status of the traveler, who, in most cases, besides his business card, brings a letter of recommendation to some known resident in the port; indeed, this is almost a requisite, and should not be overlooked by intending visitors.

NEW UNITED STATES RAILWAY ENTERPRISE IN ECUADOR.

An important railway enterprise in Ecuador, backed by capital and management from the United States, is described by United States Consul-General De Leon in a report to the State Department in December, 1898, as follows:

The contract entered into June 14, 1897, between Mr. Archer Harman, of New York, on behalf of himself and associates, with the Ecuadorian Government, after much discussion and some opposition was finally approved by the Congress of Ecuador at the session just ended. The details of the contract have not been officially published, but I have obtained the following data: The road is to run from Duran, on the east bank of the Guayas River, opposite Guayaquil, to Quito, a distance of perhaps 350 miles. It is to be built by Messrs. Harman and associates for Government account. They are to receive therefor \$12,282,000 in first-mortgage bonds, secured by a lien on the customs revenues of the Republic; \$5,250,000 in 7 per cent preferred stock; and 51 per cent of the common stock. Six per cent interest and 1 per cent per annum amortization on the mortgage bonds is guaranteed by the Government, which it is figured will be retired in thirty-three years. The promoter of the enterprise is Mr. Archer Harman, a native of Virginia, now of New York. The president is Robert M. Thompson, esq. (president New York Metal Exchange); secretary, Charles H. Sherrell (lawyer); and Charles R. Lee (manager of United States Leather Company) is treasurer. Messrs. Dent, Palmer & Co., of London and New York, finance the enterprise, and it is stated that the entire sum necessary to build the road has been secured.

The board of directors number twenty-two, and are as follows: American—R. M. Thompson, Ex-Governor George Hoadley, George Coppel (of Maitland, Coppel & Co.), J. H. Powers Farr (of Kilbreth & Farr), George Norton (of Norton, Tunstall & Co.), Stuart Coates (of J. & P. Coates Thread Company), Erskine Hewitt (vice Hon. Thomas F. Bayard, deceased), Col. W. F. Shunk, Thomas Carmichael (Dent, Palmer & Co.), Hon. A. S. Hewitt, Charles R. Lee, John C. Kilbreth, Archer Harman (27 Pine street, New York),

T. Cooper Hewitt, and Charles H. Sherrell; English—Hon. St. George Lane Fox Pitt, Sir Allen Sarle, Sir Miles Fenton, and Sir Gerald Fitzgerald; Ecuadorian—Señor Don Luis Dillon, General Moncayo, and Señor Don Carlos Freile Zaldumbide.

The wealth and standing of a number of these directors seem to render the building of the road an assured fact. Mr. William F. Shunk, an engineer of high repute, is now in the field with a corps of associates determining the lines; and the actual work of construction, I am told by Mr. Harmon, who has returned to the United States, is expected to begin by April or May next.

This railway will connect Quito, the capital, with Guayaquil, on the tidewater of the Pacific, and is to be, according to contract with the Government, 40-inch gauge with 50-pound rails. Of this line there now exists a 60-mile road of 92-centimeter gauge in operation between Duran, the terminal opposite Guayaquil and Chimbo bridge. The broadening of gauge, laying of new ties and rails, improving roadbed, and other work, I am assured, will amount to almost a new construction of this part of the line. This road traverses the low alluvial coast section, which lies between the Andes and the ocean, partially reclaimed and devoted to the cultivation of cane, coffee, rice, cacao, and other tropical products.

The end of the road is at the foot of the western Cordillera of the Andes, at an elevation of 345 meters (1,130 feet) above sea level, and for the next 60 miles there is a rise to Sibambe, through the forest slopes of the mountains, to an altitude of 2,481 meters (8,138 feet), a survey of which has been made during the last three years under the direction of Mr. J. V. S. Miller, an English engineer employed by the Ecuadorian Government. This is considered to be the most difficult part of the entire line, as the country is very abrupt and of andesite (an exceptionally hard rock) formation, besides being side-hill forest, liable to land slides. This portion of the projected railway runs through a territory as yet undeveloped, on account of lack of transportation facilities, but which will become, I am told, immensely valuable for coffee and other crops when work is completed. The country constitutes a part of what is known as the Sierras of Ecuador, a series of mountain valleys (between alternate ridges), having a mean elevation of 8,000 feet above sea level, abounding in every type of production peculiar to the temperate zone, comparatively populous, enjoying a cool and bracing climate, and seemingly only awaiting the completion of this railway to become commercially the most important section of Ecuador. What progress can a country expect, be nature ever so bountiful or population ever so dense and industrious, if separated from the outside world, as this section of Ecuador now is, by almost impassable mule trails, requiring ten or fifteen days to reach a market?

This is the work which is expected to be under construction within the next six months, to cost \$17,532,000 and to be completed within the next three or four years.

AN EXPOSITION IN VENEZUELA IN 1900.

Venezuela, the most accessible to the United States of the South American countries, in which an interest in the products of this country has already been stimulated by the opening of a warehouse for the display of American goods at its chief city, is to hold an exposition in 1900, thus affording the merchants of the United States an opportunity to exhibit their goods to a large number of people of that and adjacent countries. The following is a translation of the decree of President Andrade establishing the chief regulations relative to the exposition:

The President of the United States of Venezuela hereby decrees:

ARTICLE 1. On the 1st of January, 1900, there shall be opened in Venezuela a national exposition of works of art and of natural, agricultural, and manufactured products. The place for the exposition shall be in this capital, and will be selected later. There shall be exhibited also other objects, which, on account of their importance or value, may be sent for this purpose.

ART. 2. This decree shall be communicated by the Ministry of Internal Affairs to all friendly nations, and more especially to the Latin-American countries, in order that they may exhibit their products and be officially represented.

ART. 3. The Ministry of Agriculture, Industry, and Commerce will appoint a board of directors, who shall be charged with the organization of the exposition and the formulation of regulations for the same.

ART. 4. The above-mentioned board of directors will appoint other boards in the different States, and the presidents of the States shall take the necessary steps to cause all the riches and progress of the country to be exhibited here.

ART. 5. The nations that may wish to take part in the exposition must be represented in all and each of the acts which may be decreed to celebrate the advent of the new century.

ART. 6. In the Venezuelan exposition, in addition to the products and articles mentioned in Article 1, there will be exhibited the methods of education employed in the country; the methods of application and general workings of science, letters, and art; everything relating to social economy, hygiene, and public charity, systems of colonization, and all branches of national and foreign industry.

ART. 7. The works of art to be exhibited must be sent to the board of directors, together with a statement explaining the object, its character and dimensions, and also whether it has ever been exhibited in any other exposition.

ART. 8. The statements referred to in the preceding article can be sent to the board of directors, beginning with January 1, 1899.

ART. 9. Judges shall be appointed to examine and pass upon paintings, cardboard drawings, and sketches, engravings on medals and fine stones, architectural objects, industrial and agricultural products, large machinery and apparatus, scientific works, physical and chemical instruments with their products, and works of art in general. The judges shall be named by the board of directors, with the approval of the President of the Republic.

ART. 10. All products, articles, and works to be exhibited must be marked with the number of their respective sections.

ART. 11. The board of directors shall divide the exposition into sections, and arrange catalogues for each section.

ART. 12. The judges referred to in article 9 shall send to the board of directors their decisions as to the diplomas to be given, said diplomas to be authorized by the Minister of Agriculture, Industry, and Commerce, and the president and secretary of the board of directors.

ART. 13. The awards shall consist of gold, silver, and bronze medals and honorable mention.

ART. 14. The Venezuelan exposition shall be closed promptly on the 27th of April, 1900.

ART. 15. The board of directors shall adopt all necessary measures to promote the objects of the Venezuelan exposition.

ART. 16. All the departments of the National Executive shall take all measures necessary for the prompt fulfillment of this decree.

A MARKET IN VENEZUELA FOR COTTON GOODS FROM THE UNITED STATES.

An important market for cotton goods, especially of the coarser grades, lies at the very doors of the American manufacturers, according to Consul Goldschmidt, of La Guayra, Venezuela, who, in a report to the State Department in December, 1898, says:

In looking over the Venezuelan market I find that very few cotton goods come from the United States. With the exception of a few cheap prints and heavy unbleached duck goods and sailcloths, no American goods can be found in the stores of this country. I inquired into the reason for this and find that very little effort is made by our manufacturers to introduce their products here, and I suppose that the same might be said of the greater part of South America.

Overproduction is the general cry of the cotton manufacturers at home, with the attendant shutting down of factories and the reduction of wages. Here we have a continent with over 150,000,000 people, who, by reason of the climate, are the natural consumers of very large quantities of manufactured cottons of all kinds; and these goods are mainly bought from Germany, England, and France.

During my visit to the United States recently, I questioned a manufacturer as to why his goods were not represented in this market, and in answer was told that he would like very much to increase his business in this direction, but he was afraid of doing business with these countries on credit. He also said that his company had an agreement with a large jobbing house not to do any direct export business.

As to the first reason, I will say that there are houses in this business here and in other adjoining countries which are just as reliable as any United States house, and, as far as credit is concerned, very little business is done in the United States where the "dating ahead" of bills is not the rule rather than the exception. I firmly believe that business can be done here just as safely, if properly handled, as in the United States, and that certain grades of goods for which there is now no market at home can be sold here.

In my opinion, the way of attaining the best results would be to open American business houses in the largest distributing centers of South America, which would handle American goods exclusively. This would be impossible for any establishment to undertake alone, but consolidation of interests might accomplish it without too much individual risk.

The question of personnel is also an important factor. There is no use in sending men here who do not understand Spanish, and can not accommodate themselves to the habits and customs of these people, preeminently different from our own. A man must first of all be a gentleman in every sense of the word. Polish goes a great way here. You can not do things in a rush, but persistence and hard work will tell. I have observed that many American drummers sent to these countries to sell goods are, on account of their behavior, a detriment to American business, some of them not knowing what it is to be sober after 8 o'clock in the morning, and, after staying a few months at a local hotel, they frequently leave without paying their board. The result is that good men suffer from their behavior. The English or German representatives are totally different, as a rule. The house which sends them here generally furnishes them with letters of credit, and such a thing as not paying for what they get is unknown. They are generally well-posted, educated gentlemen, and, comparatively speaking, far superior to the average drummer from our country. The latter do not compare at all favorably with our traveling salesmen at home.

I wish to emphasize the necessity of sending good men to represent American interests, and I know that we have many such, if only care is taken in their selection. If these suggestions were followed, the result would be surprising, for American goods can undoubtedly stand the highest competition, and will sell alongside the best of European makes. They are in many cases admittedly superior and fully as cheap. Now is the time for the American manufacturer to introduce his goods into these markets, and, with the application of his usual common sense, he can beat the world in the sale of cotton fabrics, and reap the benefits of an immense commerce, which is to-day sadly neglected.

Here are a few articles which, in my opinion, can be sold in this market: Prints, light and dark, ordinary width; prints, light and dark, wider; ginghams, staple, small checks; ginghams, larger checks; cretonnes and chintz, lining cambrics and silesia, bleached and unbleached cottons, cottonades for suitings, denims and tickings, cotton blankets, white and colored cotton bedspreads, checked and striped nainsooks, printed lawns, and challies, cotton 'towelings by the yard, cotton towels by the piece, mosquito netting, and many other similar items.

Packing is a factor to be considered, as, by the customs laws here, everything pays duty according to weight; therefore, everything in excess of what is absolutely necessary, such as cardboard or boards on which goods are folded or rolled, should be omitted. Heavy packing cases pay the full amount of the specified duty on the contents. Another thing to be considered is that packages must only contain merchandise of one particular kind, since if there are many kinds, the whole must pay duty as of the higher class, of which there may only be a small quantity.

AMERICAN COMPETITION WITH BRITISH TRADE IN COLOMBIA.

[British Board of Trade Journal, February, 1898.]

Mr. Villiers, acting consul-general at Bogota, in a recent report to the Foreign Office, states that, in view of certain clauses in the recent United States tariff law, a determined attempt will perhaps be made by that country to secure more trade with Colombia; the chief obstacles to this have hitherto been the higher cost of production in the United States, and the refusals to grant the long terms of credit customary in Bogota.

The Board of Trade Journal, in June and September last, published accounts of the Philadelphia Commercial Museum, and referred to the efforts being made thereby to obtain fuller trade information concerning South America.

In cotton, linen, or cloth goods, United States competition need not at present be feared; the danger is more likely to come from trade in iron, steel, railway materials, and rolling stock, bridges, etc.; not only in the heavy materials, but also in such small articles as steel tools, saws, files and rasps, meat choppers, wire nails, etc. Now also that coffee and sugar planting is increasing, and more especially the proper drying and preparing of the former and refining of the latter, machinery for these purposes deserves the attention of Great Britain. Some excellent wheat is also being grown, and flour mills have been erected in certain districts. Architectural

sheet-iron work, roofing, etc., and barbed wire are already largely supplied from the States, as are also bicycles, sewing machines, clocks, false jewelry, candles, electrical appliances, etc.

This brief and by no means complete outline concerning possible or actual competition may be of use to British commerce; but the most important thing in trade with Colombia is the question of packing.

British firms and mercantile houses who "ship to all parts of the world" are much too apt to think that their experience has taught them all there is to know about the packing and transshipment of goods; and consequently they do not comply with specific directions sent them. This is not a theory, but a fact.

Goods to arrive at any interior Colombian town must be packed for mule transport whenever this is possible, but the requirements for this particular form of transport vary according to the quality of the road over which the merchandise has to travel; on some roads, that is to say, a mule can carry a load that he could not on another; sometimes it is a question of weight, sometimes of length of the load, and whether the road is muddy, marshy, rocky, precipitous or tortuous, with rocky defiles, etc.; and sometimes the load can only be transported by bullocks.

Another question to be considered in packing is the equality of loads. A large consignment of merchandise packed in an infinite variety of shape, weight, and size, may be kept waiting until each package can be paired; if this can not be done with one of the same consignment the carriers will pair it with one of another consignment, for which they will patiently wait months if necessary, to the loss and annoyance of the consignee, who perhaps will ultimately have to pay exorbitant special rates to obtain his goods, which careful packing might have avoided.

Again the question of goods arriving in the dry or rain season, some roads becoming almost impassable in the latter period, makes a difference as to the method of packing, and consequent economy in transport.

Shipments are sometimes conveyed by bullock carts in the few parts where a suitable road exists, or are carried on men's shoulders at enormous expense.

On such points no "many years' experience all over the world" can ever be a guide, and a little reflection seems to make so evident that its demonstration would appear unnecessary were it not that experience proves the contrary; the explanations or excuses for not following shipping directions only cause exasperation and disappointment, and turn trade into channels where care in this all-important particular is more scrupulously observed. England should surely by proper attention to such simple details do all in her power to maintain her supremacy.

AMERICAN MANUFACTURERS IN COLOMBIA.

Consul Bidlake, of Barranquilla, Colombia, under date of October 1, 1897, says:

In the packing of goods for this market American manufacturers do not compare favorably with European manufacturers. Merchants complain that they can not deal directly with the manufacturer, as he knows nothing about packing for this market, and that they are compelled to buy through commission firms who repack the merchandise before forwarding. Duty is collected on the gross weight of the package or case, according to its class; therefore, there should be no unnecessary weight in the packing or covering.

As to boots and shoes, practically only those for women and children are imported and are of the French style, with Spanish heel, costing from 50 to 84 francs a dozen for women's and from 24 to 48 francs for children's. Men's are manufactured in the country, the uppers only being imported.

American tools of all kinds are preferred to European. They are better finished, lighter, and more convenient, but at the same time they are also more expensive. The machete may be taken as an example; the Collins machete is known throughout the whole of South America and is the standard. Germany makes an exact pattern of good material and offers to replace it should it break.

All furniture is imported--the cheap grades of common yellow chairs, cane seats, from the United States; round wood, black or brown, cane seats, from Bohemia, Austria. The Austrian goods are imported very largely; they are light, cool, and suitable for the climate. Furniture of this class comes knocked down, each piece well wrapped with straw and covered with burlap, in bales of 125 pounds, with one iron band lengthways on the bales.

The manager of the electric-light plant in this city informs me that the lowest price that he has been offered incandescent lamps in the United States is 18 cents, but that he has had offers from Italy of ordinary lamps of 3.1 watts candlepower at 55 centimes (10.6 cents). He also informs me that wire can be bought in Germany at from 10 to 15 per cent less than in the United States. In writing to me upon electrical apparatus in Colombia, the manager says:

"In the country which you represent, the major part of the manufacturers of this class of merchandise are sleeping upon their laurels, waiting for orders to come in through commission firms. They do not study the South American market, so as to become acquainted with the requirements of these countries."

PRESENT COMMERCIAL CONDITIONS IN SOUTH AMERICA.

REPORT FROM A SPECIAL BRITISH COMMISSIONER ON THE TRADE CONDITIONS IN THE PRINCIPAL COUNTRIES AND BY PRINCIPAL ARTICLES.

A special commissioner was sent to South America by the British Board of Trade in 1898 to study the commerce of the various countries and report in a practical way for the benefit of English manufacturers and exporters. The following are extracts from the reports of the commissioner, Mr. T. Worthington:

ARGENTINA.

WHITE OR PLAIN COTTON PIECE GOODS.

The great bulk of these are still British, but there is a certain amount of competition in some directions—e. g., American flannel-ettes, both white and gray, are preferred. In some lines—e. g., wove trouserings, etc.—German goods have for years had the largest sale, but now it is evident on all hands that the manufacturers which are coming to the front in most lines are the Italians. Their colors are bright and lasting, their goods are almost always made of grandrilled yarn, they are asserted to be at the front in the matter of original designs for buyers from this market to choose from, and if a buyer wants a particular pattern in wove goods they have a number of handlooms and colors at their offices and are prepared to make a sample and quote for it at short notice. The vast numbers of their countrymen in this Republic know and appreciate the goods—so much so that some Italians are suspected of selling Manchester trouserings as Italian—and, finally, they have the advantage of rapid and direct communication from Genoa at freights about one-half those from the ports of northern Europe. American prints are also sold here to some extent; but, although they are nice goods, they are not a very serious factor so far in regular business, owing to manufacturers not being prepared to supply them according to a given assortment of patterns, so that importers here have to buy on the assortments offered and in large lots, while they may depress prices at times.

CORDAGE AND TWINE.

Sisal cordage is best known and most generally used. It appears that for some time past the United States market has been the cheapest for this. Jute cordage from Italy, of excellent appearance, costing to sell about 23 cents gold per kilogram, was shown to me as sold as Italian hemp, which costs 20 per cent more. Cotton cordage and twine come from the United States.

FURNITURE, CABINET, AND UPHOLSTERY WARES.

Owing to the high tariff the importation of furniture is of comparatively small importance and consists largely of cheap Vienna and American chairs. The native industry is an extensive one; it is mostly veneer work which is produced, and very little of it high class, the great majority being quite the contrary. Curtains and furniture stuffs, except silk plush, come chiefly from France in the case of the better qualities, costing, say, 4 francs (77 cents) per meter upward, and from France and Germany in the case of lower qualities. Italy is competing in bands and tassels.

HAND PUMPS.

Ordinary single-action well pumps are American; also, the greater part of the double-action pumps. A common kind of semi-rotary pump has been coming freely of late from Germany.

STEAM ENGINES.

The railway companies being, as heretofore mentioned, almost all English, are naturally inclined to import locomotives, like other rolling stock, from England, and, as a rule, do so. I have heard of considerable orders having gone to the United States, not on the grounds of superiority or greater suitability to the country (whatever might have been the case formerly in this respect), but because British makers are unable to give early delivery; and the leading American makers have influential and active agents on the spot. Formerly, no doubt, for newly made and poorly ballasted lines, the United States made the most suitable engines, but the experience of the English companies here has proved that equally suitable engines can be made in England; and I was informed by the chief superintendent of the Government lines that they had obtained better engines for their narrow-gauge lines from a British maker than from the United States.

AGRICULTURAL MACHINERY.

In agricultural machinery, such as plows, reapers, shellers, and sowers, the United States seems now to do the biggest share of the trade—something like 90 per cent, I am assured. The British makers, as a rule, produce too heavy and expensive a machine. They are doubtless handicapped, to some extent, owing to the want of equal facilities for employing the light wood work which enters so much into American machines.

ELECTRICAL MACHINERY.

The bulk of the electric-light plant here and practically all the electric traction machinery is from the United States. Small electric motors and fittings, too, are chiefly American. The American motor is neater, lighter, and cheaper. For example, I have seen a 3-horse-power American motor with a hook at the top for lifting it about, which was certainly a neater and less cumbersome machine than an

English 2-horsepower one which was shown me. The English motor is often capable of working far above its indicated power, or, say, the power which has been indented for; but this is not wanted and only adds to the cost. English makers, too, have given dissatisfaction in their careless packing of delicate machinery—e. g., volt meters, which arrive broken, a thing which never happens when they come from the United States. The hold which American electric machinery has obtained upon this market is sometimes attributed to its having been introduced in a more energetic and business-like manner, and there may be a good deal in this; but I am inclined to think, from what I have learned, that its perfection, as a rule, for doing its work, combined with the neatness and lightness of the American machinery, is what has kept it to the front. German machinery—frequently a poor and cheap copy of the American—finds a market, and even Italian work is now coming. The American electric machinery is looked upon as the most advanced. The English, I am told, have not kept pace with the American improvements and new inventions, while the Germans have carefully watched and promptly copied the American.

BICYCLES.

United States makes predominate. One make has a sale of some 2,000 machines annually, the market for which has been obtained by good advertising and push on the part of the importers, who are content with moderate profits—at first none at all. In sewing machines, the German "Singer" is stated to be the cheapest in the market and can be bought here for \$12 gold.

IMPLEMENTS AND TOOLS OF INDUSTRY.

Picks, spades, shovels, and adzes come in largest quantities from the United States. Scythe blades are much less used than formerly, having been superseded by machine mowers and weed cutters, which come from the United States; the scythe blades are mostly French. Augers, gimlets, chisels, axes, and now files are chiefly English, but plane blades and saw blades (for mounting here) are French, and must have the French mark (Peugeot's). In two-handled crosscut saws the English are preferred, but there is also a considerable sale of German saws of this kind of poor quality and much cheaper, while carpenters' handsaws come from the United States. Coach wrenches come from the United States. All-iron wrenches come cheapest from Germany and France. Carpenters' braces come cheapest from the United States.

HARDWARE AND CUTLERY.

In cast-iron hollow ware, the tinned ware comes from England, the enameled ware comes mostly from Germany, but this is an article not much liked by importers, owing to the heavy claims for crackage, and the business in it is insignificant. In wrought-iron hollow ware, the bulk of the trade is in German and French goods. The United States gray enameled ware holds its own, but the trade in this description is not large. I understand that the United States is now trying to compete with the Continent in the regular white-white and blue-white ware; English manufacturers do not appear able to compete, and practically have not done so for years. Wrought-iron enameled baths (for fixtures) come lightest and best from the United States.

RAILROAD IRON OF ALL SORTS.

Steel rails, which are free from all duty when new, have hitherto come from the United Kingdom. In rails for tramways, however, a change is taking place. The 9-inch-deep rail, such as is commonly used in the United States, has been found to suit the pavement here best, and will undoubtedly be adopted in place of the 6-inch-deep rail hitherto in use. The management of a new electric street-car line tried hard, some time since, to have this 9-inch rail made in England, but in vain; makers had not made it before and did want to incur the expense of new rollers. Now all the tramways will require this rail, and they will get it in the United States.

WIRE.

The fencing wire comes chiefly from the Continent, though recently some of the business appears to be returning to England.

BRAZIL.

The import trade is in many hands. A large, and I am disposed to think increasing, proportion of it is done direct by means of travelers or local representatives of European manufacturers. Some idea of the importance of the business done in this manner may be had from considering that the total of European (and American) collections by drafts through Rio de Janeiro alone, based on figures I have obtained from the five leading non-Brazilian banks, must have amounted to something like £2,500,000 to £3,000,000 last year, while a very large sum must be added to represent the business done in account current; that is, where the buyers are allowed to remit more or less, as they are able.

National industries are fostered by the protective tariff, and their products form in some lines the most serious competitors with imports; but in others they do not appear to flourish or are more or less dependent on the condition of exchange. The largest and most developed of these industries is that of manufacturing the raw cotton of the country.

The usual terms of payment are, in the dry goods trade, four to six months from end of month; and in the hardware trade, ninety days from end of month; but four months is, I am told, given by some merchants importing on their own account. In account current, direct business terms of payment are very elastic, as already intimated, and probably in some lines none of our competitors make them more so than do British shippers. Indeed, I have been told the latter are practically the only ones working on this system in dry goods. Indents given to merchants here are usually on the basis of cash in ninety days from arrival of goods from Europe, or sixty days, and sometimes thirty days, from the United States. National factories generally sell at ninety days.

Exchange has fluctuated so much this year (namely, from about 7d. at the beginning to 5½d. in April and May, to 7½d. at the date of my arrival here, and from that again up to 8½d. on the 10th instant, while at the date of this letter it is 8½d.) that import business has been much interfered with. In addition to this the very low price of coffee, the chief product of this part of Brazil, makes the people poor and reduces demand to a minimum.

ARMS AND AMMUNITION.

Revolvers are American (Smith & Wesson), with cheap Belgian and American imitations. Spanish-made imitations of Smith & Wesson's revolvers are also sold, and are very cheap; I saw one marked "New York," and with a horsehead on the handle, said to have cost 7½ francs (\$1.45). Another marked "Smith & Wesson's cartridges will be found to fit best this revolver," and with some initials on the handle, said to have cost 14 francs (\$2.70). The sale of revolvers, however, is probably not one-twentieth that of small double-barreled pistols, which come from Belgium. Shot is made in the country, but is of poor quality. The Newcastle chilled shot is liked best, but a cheaper American product is now coming and winning its way to favor. The makers of this shot, it may be remarked, send buyers a beautifully got up sample case, about 15 by 4 by 2 inches, with samples of the various sizes in glass tubes; this is said to be, as will be readily understood, a vast assistance to sales.

CARRIAGES AND WAGONS, RAILWAY.

The United States has, I understand, heretofore been the chief purveyor of these. A certain amount of building is done by the railway companies, importing what raw or partly manufactured material—such as axles and steel tires, special fittings, etc.—they require, and there is also a national factory which builds railway carriages.

COAL.

The strike in the South Wales colliery districts gave a great incentive to the efforts being made to introduce Pocahontas and other American coal here to replace Cardiff coal, and had it not been for the Spanish-American war occurring about the same time, the result would have been more apparent. As it was, however, several cargoes of American coal actually came, and, moreover, one was consigned to the largest dealer in the place, and another to one of the largest European steamship lines. The cost of these two cargoes is reported to have been 6s. 6d. (\$1.70) per ton f. o. b., and freight 21s. (\$5.11) in the one case and 18s. (\$4.38) in the other. Great efforts are being made, I am told, to capture the railway orders. England has had all the coal trade in Brazil heretofore (except for a small amount of soft native coal in Rio Grande and some American gas coal), and the import amounted last year to 532,437 tons to this port alone.

IMPLEMENTS AND TOOLS OF INDUSTRY.

Spades and shovels come largely from the United States, and axes almost entirely, but English hoes still hold their own. Wheelbarrows are also imported from the United States, and compete with barrows made locally upon the American model. Carpenters' tools are largely imported from Germany. A German brace, with the twenty-four bits to correspond, sells here at 5 milreis (85 cents). A German screw-driver sells here at 4 milreis (68 cents) per dozen for assorted sizes—3, 4, 5, and 6 inches.

HARDWARE AND CUTLERY.

In cast-iron hollow ware there has not hitherto been any competition with the English article, the retinned being mostly sold for upcountry and the enameled for town use. Recently, however, some cast-iron hollow ware has been sold in the market which is said to be a German imitation. In wrought-iron ware, retinned, the French make appears to hold its own for kitchen utensils, and the mark is so well known that cheaper English goods, I am told, have not been able to compete. Large retinned basins, however, come from England. Enameled ware is mostly German. Door locks, which are made by the country folk in Portugal in their houses during the winter months, have a large sale. It was contemplated at one time to make these locks in a large iron works here, and special machinery was imported for the purpose. It has, however, never been started, the opinion of the present management being against the prospect of successful competition. A 5-inch Oporto lock sells here at 1.250 milreis (21 cents); a 6-inch, at 1.100 milreis (18 cents). Padlocks of English make are said to have the largest sale, but cheaper German makes are also freely sold. Large flat hinges for gates are English, but bright door hinges are chiefly of German and American make.

MACHINERY.

The majority of stationary engines seem to be of British make, but the reverse is the case with regard to locomotives. The reason alleged for the latter being chiefly American is that the Americans make the most suitable engines for poorly ballasted and new lines; and I have been told, in proof thereof, that some of the smaller lines, which formerly used British locomotives, have taken to Baldwin's. I am not satisfied that the reason alleged is the correct one, nor that it is a fact; not being an expert, I can not say authoritatively, but what I saw and learned in the Argentine seemed to show that the United States makers are not alone successful in building locomotives for new countries, and, curiously enough, some very fine American locomotives, which were imported here a few years ago, proved too heavy and rigid for the road. It seems to me that one great reason of the success of the Baldwin Company in capturing the trade is their admirable local organization. They have good influential agents and also several engineers of the company always on the spot where they are needed, to attend to complaints, remedy defects, and watch for new requirements. Their locomotives are light and cheap to make. They have a large business in the country, so that they can afford to incur expenses in protecting and extending their trade, as well as to sell on very long credit, and yet accept what seem to be moderate prices. Probably the machinery of largest sale in this part of Brazil is that which has to do with the cleaning and preparing of coffee. This is very largely made in the country. For general agricultural machinery there is not much demand, coffee being practically the one crop of the country; but there are evidences of a change having begun in this respect. Light American plows with wooden handles and reversible shares (for hilly country), costing from 45 to 70 milreis (\$7.75 to \$12.06) each, are the favorites, but a few large and much more expensive iron plows—German and French—are also sold. Cotton-mill furnishings are somewhat of a specialty, and come mostly from England. A large importer of these complained to me of the frequent bad interior packing—*e. g.*, drop pins came packed in cardboard boxes of 3 gross each, and the boxes, being too weak for this purpose, often arrived broken. Similarly, belt buckles were packed in paper packages of a quarter of a gross each, and out of a consignment of 200 packages recently received, only 1 dozen arrived fit to put on the shelves; they should be in small cardboard boxes.

ELECTRICAL MACHINERY.

In electric machinery, the American make has by far the largest sale. It is worth noting in this connection that there is an American electrical expert here, with electrical experts under him, who is well backed by a big American company. He has a shop in the leading street of Rio de Janeiro to show his wares, and is, I am assured, the only man in the place who is prepared to estimate at once for an electrical installation anywhere in the country; others have to write to principals. It is not surprising that, quite apart from considerations of suitability and cheapness of machinery, he does the most business.

IRON AND STEEL MANUFACTURES.

The demand for bar, angle, bolt, and rod (including soft steel) is principally confined to the smaller sizes, and the national rolling mill, already referred to, supplies part of this demand (say, up to 3 inches by one-half inch, or 2 inches for square, or 2 inches diameter for round), turning out 250 to 300 tons per month. The import, however, is much larger. Moreover the duty (100 reis per kilogram) is not such a protection to this industry as the duties on castings are to cast-iron work, and I gather that the returns from the rolling mill are not very satisfactory. Bars for up country have to be bent in 5 or 6 feet lengths for packing on mules, and the bending is largely done here. The iron used is often Swedish, which, notwithstanding that its test is much higher than English or Belgian, is preferred in the interior, because after it is worn out in its first use it serves for making into knives, etc., locally. The competition of Belgian iron, of course, affects the sale of English, and is keenly felt, as is likewise the competition of iron from the United States.

The agents for a large English maker of railroad iron of all sorts told me they missed a large contract for the Government railway a couple of years ago because their principals insisted upon payment in Europe, whereas the terms of tender required payment here at the exchange of the day of delivery. After exchange of the day of delivery has been settled it is well known that, owing to official formalities which have to be gone through, an interval of several weeks may elapse before collection, during which exchange may have altered again; hence the objection to payment here. The contract was, however, taken by a leading German maker, although his price was not so cheap. A heavy loss in exchange ensued, but with diplomatic (German) assistance, the maker obtained compensation. A contract for 3,000 tons of steel rails for a railway under English management recently went to the United States. Wire for fencing, both black and galvanized, appears to be mostly Belgian and German; but barbed wire, rolled on wooden bobbins of convenient size, comes from the United States. Belgian competition tells in hoops, sheets, and boiler plates, too, and some importers who have held to the English makers as long as they possibly could have been recently induced to order Belgian sheets, owing to the great difference of price in their favor—30s. and 40s. (\$7.29 and \$9.73) per ton. They say their buyers will have the cheap stuff, even for boilers. Galvanized and corrugated sheets are still English. Tinned plates (from England) are imported for making coffee-sample tins, tins for guava cheese and other sweetmeats, tobacco, etc., probably to the extent of at least 500 cases per month. The tin-making industry is mostly carried on in comparatively small establishments, and I have not seen any very high-class work. The plates are almost all coke; perhaps 5 per cent, I am informed, may be charcoal. The fruit-canning industry does not seem to be large. Terne plates are imported (also from England) for the national safety-match factories, which all put up their matches in terne-plate cases containing 10 dozen packets of 10 boxes each. These plates are not used for roofing and not much now for guttering, for which purpose galvanized iron is preferred. Wrought-iron building girders have not hitherto been largely imported, but their use will doubtless increase, and Belgium is to the front with cheap prices. Iron pipes, both black and galvanized, used all to come from England, but now the United States is a strong competitor; while in regard to cocks, joints, T's, etc., it is said to be only because people are accustomed to English shapes that so many still come from England. A large importer here told me that the United States makes were lighter (duty is by weight) and cheaper, and he looked forward to buying in the United States later on. Wire nails (Paris points) are made in the country from imported Belgian wire. The old English horseshoe nail, which required finishing by the farrier before being used (and the form of which English makers would not change), was replaced a few years ago by the ready-finished German nail, which now holds the market.

BRASS.

A certain amount of brass smelting is done in the country, black-lead crucibles being used for the purpose. One importer of these who used to get the Battersea make told me that he read in the Philadelphia Manufacturer of an American black-lead crucible. He sent for a catalogue, and found that the prices compare as follows:

American—3½ cents per number (number equals about 3 pounds of metal capacity), less 35 per cent.

English—3d. (6.08 cents) per number (number equals about 1 kilogram or 2.2046 pounds of metal capacity), less 20 per cent.

He has since imported the American article, finding it quite satisfactory.

CORDAGE AND TWINE.

Cordage for marine uses is mostly imported from England. There is some United States competition, and for use on a winch the American rope is said to be preferred, as being drier and slipping less. For general uses—agricultural, roping bales, tying mule packs, parcel string, etc.—national factories supply the market. They use chiefly Madras "sunn" hemp. Seaming twine for sewing the coffee bags used to be all imported, but is now largely made locally from Italian tow.

COTTON MANUFACTURES.

In white piece goods, practically the only competitors of British manufactures are national. The most salable qualities are:

Bouquet des Moças—24½ inches wide; weight, 1,270 grams per piece; price, 6.800 milreis (\$1.15) per piece.

Fim de Seculo—28 inches wide; weight, 1,600 grams per piece; price, 9 milreis (\$1.53) per piece.

Dos Presidentes—30 inches wide; weight, 1,690 grams per piece; price, 8.800 milreis (\$1.49) per piece.

Percalle BBB—30 inches wide; weight, 1,510 grams per piece; price, 9.600 milreis (\$1.63) per piece.

Pinga Fina—31½ inches wide; weight, 2,210 grams per piece; price, 11.600 milreis (\$1.97) per piece.

Cretonne Excelsior—31 inches wide; weight, 2,440 grams per piece; price, 10.400 milreis (\$1.76) per piece.

Gata—30 inches wide; weight, 1,920 grams per piece; price, 9.200 milreis (\$1.56) per piece.

Flores—27½ inches wide; weight, 1,550 grams per piece; price, 8.400 milreis (\$1.42) per piece.

It will be observed that whites are usually made in pieces of 20 meters (21.8 yards).

Cotton flannels have dropped out of use to a great extent, being replaced by woolen fabrics made chiefly in the southern provinces. Gray cottons are almost entirely of national make, although doubtless the recent rise in exchange will bring some from England.

Prints are produced successfully in the country, but it is naturally impossible for national factories to undertake the immense variety of patterns offered from abroad, and therefore there is still a large sale of imported printed fabrics. In these the competition with English is not important; it is mostly in dark grounds.

In wove colored goods—ginghams, oxfords, trouserings, zephyrs, etc.—the national factories supply a large proportion of the demand, and owing to the excellence of the cotton used it is difficult for imported goods to compete, except in some poor makes, for which there is not a great requirement; nevertheless, imported goods do compete, at least in certain lines, and Italian goods are noted as coming particularly to the front.

In blue drills the American "S" holds its own (in virtue of the mark) against similar English goods. National goods also compete favorably. One class of the latter, 27 inches wide, weighing 164 grams per meter, sells at 1.100 milreis (18.7 cents) per meter. The excellence of the dye is to be noted.

FURNITURE.

With a good supply of native hard wood of various kinds and a high protective duty, it is not surprising that most of the furniture used in the country is made locally. The only importations possible seem to be cheap chairs which come from the United States and bent-wood furniture from Austria.

GLASS.

Supplies of plate glass seem to come almost entirely from the Continent, although some business still exists with England. A business man of long experience in the country told me that some years ago, when the shop windows were still largely of common glass, foreseeing the change which must inevitably come about in the use of plate glass, he arranged an agency for large English makers with a first-class local house. The efforts of the latter, however, were unavailing against Belgian competition and were not properly backed by the manufacturers, who should have been prepared in the first instance to make prices in order to capture the trade, as the Americans so often do in similar cases.

CHILE.

MACHINERY.

The market for mining machinery is, like the industry itself, in a very depressed condition. German mining machinery is reported better liked than English, and has also the advantage of there being more English mine managers than there used to be; but English winding engines hold their own.

Mining fuse, which was formerly exclusively of English manufacture, is now largely imported from Germany, being very much cheaper, while the quality is satisfactory.

In agricultural machinery the United States seems to have gained the ascendancy. The thrashing machines, for example, are reported lighter and quicker than English, and, although they do not separate so well and will not last as long, they sell far more readily on account of their cheapness.

IRON.

In pig, bar, angle, bolt, and rod England still has the great bulk of the total trade, which is not divided in the statistics. The statistics show, however, that the continental imports have made a very great advance, while the English have not. Cheaper freights from Antwerp and Hamburg tell in favor of the former. The Belgian iron is poorer than Staffordshire, but it does well enough and will go where the c. i. f. cost is in its favor. United States pig has been coming to a small extent of late.

Steel rails are not and never can be made in the country to compete with those from elsewhere. They are admitted free.

The wire trade seems to be falling away in English makes and increasing in continental. United States wire is also coming. The cheapest cost c. i. f. is the prime consideration, and freights helped the continental makers, as will be apparent from the following rates ruling about the end of January last, as I am assured by importers, on this article, viz: Steamer from Antwerp, 20 francs and 5 per cent, or 16s. 10d. per 1,000 kilograms, say 18s. 6d. (\$1.50) per ton; steamer from Liverpool, 22s. 6d. and 5 per cent, or 23s. 7½d. (\$5.74) per ton; sailer from Hamburg, 8s. (\$1.94) per ton, no primage; sailer from Liverpool, 15s. and 10 per cent, or 16s. 6d. (\$1.01) per ton. United States barbed wire is liked.

The tinned-plate trade is a small one, but almost all in the English article, although a little has come from the United States. There are several fruit-canning enterprises in the country, some of which make their own cans; but there are also two small can factories. The machinery used, I am informed, is adequate and up to date. The lobster (really crayfish)-fishery at the island of Juan Fernandez cans its product; the management complains of being unable as yet to find anything which really prevents alkali, in which the fish is very rich, from attacking the cans. The native market takes all this canned fish.

In cast or wrought and all other iron and steel manufactures several well-appointed local foundries and machine shops supply a certain portion of the demand; but the protection is insufficient in a country of small population, and where other imports are highly protected, ever to admit of imports ceasing to be relied on, generally speaking, for supplying the great bulk of it.

Iron pipes come chiefly from England. The trade in cast-iron pipes for mains is mostly a matter of contract; but wrought-iron pipes up to 2½ inches for gas and galvanized-iron pipes up to same size for water are largely dealt in.

Anchor and chains are practically all English.

In cut iron nails the United States manufactures seem to have most acceptance; the nails are considered better proportioned, less likely to turn over or split the wood in driving. The nails are imported in neat little kegs, which form much more handy and attractive packages than the big iron drums in which English nails come.

Wrought-iron "deck" nails come largely from Germany; the English are considered too thin for ship-repair work, for which deck nails are chiefly wanted here. Common English deck nails are used for building purposes. Belgian bright horseshoe nails, which sell at about 25.50 pesos (\$9.30) per keg of 100 pounds, are fast pushing all others out of the market, being cheap and showy.

Tacks of American make prevail, and German G. C. nails are suitable. A packet containing 500 of the latter sells at 60 cents (21.7 cents).

Of wire nails the consumption is large, the supplies coming exclusively from Germany.

In bar iron I was informed by large importers who have their own house in England and none in Germany that they get this 5s. (\$1.21) per ton cheaper f. o. b. from Belgium than from England, and steel rails 10s. (\$2.43) per ton cheaper both from Belgium and the United States. Recently 25-pound rails for use on nitrate works came from the United States at £6 (\$29.19) per ton c. i. f. at Iquique;

and 30-pound rails, which should be rather cheaper, at £6 10s. (\$31.63) per ton c. i. f. at Callao from England. Belgian steel sheets, "ship quality," and American of very good quality, come 5s. (\$1.21) cheaper c. i. f. than similar English quality, and are used largely for tanks in the nitrate works.

In cast or wrought and all other iron and steel manufactures American steam pipes, I found out, are taking the place of all others, owing to their superior flexibility and strength. The small sizes, say up to 2 inches, I am informed, are about the same first cost as English, but the larger are cheaper. Cast-iron and malleable cast pipe fittings, such as elbows, tees, flanges, and crosses, as well as wrought-iron pipe fitting, such as nipples and couplings, come 25 per cent cheaper, I am assured, from the United States than from England.

Brass of all sorts, engine fittings, such as globe, horizontal, and check valves, radiator valves, gas, steam, and service cocks, steam whistles, water gauges, gauge cocks, air cocks, oil cups, lubricators, glass-body oil cups, safety valves, I am informed, all come 25 per cent cheaper from the United States than from England.

IMPLEMENTS AND TOOLS OF INDUSTRY.

It is extremely difficult to form a correct opinion as to whether the cheapest and most suitable machinery for nitrate working can be obtained from England or elsewhere, because an English management will usually get English, and a German management German machinery. Probably the advantage lies with the English; but there are exceptions—e. g., a German centrifugal pump to pump up the liquor at one part of the process was preferred in a certain English establishment on account of its being less liable to choke with mud, etc. Freight is in favor of the Continent. Portable railways, largely used in nitrate working, practically all come from Germany, the German make being lighter and cheaper than the English. A certain amount of work is turned out in Iquique, there being two large foundries there; and the nitrate works themselves, being comparatively isolated, generally have machine shops capable of doing a good part of their own renewals. I was informed that two large Chilean modern nitrate works had everything made in Valparaiso except the engines and pumps, which came from England. The electric lighting of the nitrate works is leaving English makers, because there is a very capable resident representative of the United States Westinghouse Company in Iquique, who is always ready to negotiate for new installations, to supply small refits for American machinery, and, for a moderate monthly charge, to look after the electric plant continually—an arrangement which suits the companies well. Mining machinery, reported very good, is made in Caldera, at the works of the Caldera and Copiapó Railway. German metal retorts are preferred to English. I saw a number of the latter at a smelters under English management lying about broken. American iron body, brass-mounted globe horizontal, angle, check, foot, and safety valves are reported to come 25 per cent cheaper than English.

Hammers of 25 pounds weight for breaking rock or hard ground come from Germany 6s. (\$1.459) per cwt. cheaper than from England. An American mechanic's hammer, with handle, which is liked, costs \$14.50 (\$5.29) per dozen, less 70 per cent, 5 per cent, and 2 per cent in the United States.

A small American plow, weighing 18 kilograms (39.6 pounds), and sold at \$8 (\$2.85), has cut out the old "Concepcion" and "Valparaiso" hoes for vineyard work. Supplies of spare points are brought out for sale at 55 cents (20 cents) each point.

Shovels and spades come chiefly from England, but United States competition is keenly felt.

Adzes are less wanted than formerly, owing to the timber in the south being now wrought chiefly by circular saws, which come mostly from the United States.

Chisels and screw-drivers of third quality are now coming from England to hold the market at low prices, but where woodwork bulks largely in any tool the United States seems to have an advantage. Joiners' tools generally are less wanted in proportion than formerly, owing to doors and windows for houses being made by machinery.

German brush ware is fast cutting out the English, American, and French in common and medium qualities, which have, of course, by far the larger sale. A small German scrubbing brush, used in the country for washing cloths, sells at \$2 (\$1.09) per dozen; a German horse brush, at \$7.50 (\$2.73) per dozen; a German whisk dandy, at \$6.50 (\$2.37) per dozen; German shoe brush, at \$1.50 (54 cents) per dozen; German sash tools, at \$1.40 (51 cents) per dozen; German paint brushes (French pattern), at \$6.50 (\$2.37) per dozen.

RAILWAY CARRIAGES AND WAGONS.

The railways in southern Chile almost all belong to the State, and the trade in rolling stock is chiefly by tender. Of late years the United States has been most successful. Much, however, is done locally, as at present tenders for rolling stock from local makers are preferred, if not more than 15 per cent higher than those from importers or than maximum prices fixed for the foreign article.

COAL.

Consumption is estimated at about 1,200,000 tons per annum, of which about half is native; and of the other half, about two-thirds is New South Wales, and the remainder West Hartley and other good English coal. The native coal is soft and does not compete for mining and other industries involving expensive carriage, and thus it does not appear to have gained any proportionate advantage over the imported article. It is worthy of note that much of the English coal comes to the nitrate ports in French bottoms, large vessels with several holds, whose owners buy the coal on ship's account and sell each hold to separate buyers with contract for delivery at the rate of 100 tons per day from each, so that great dispatch is secured. As these vessels get a mileage bounty from the French Government, they sell their cargoes profitably at a rate which would leave the English shipper a loss after paying ordinary freight of 2s. 6d. (60.8 cents) a ton or more.

COTTON MANUFACTURES.

These are all imported.

In white shirtings, drills, etc., English goods hold the market, but there is also a comparatively insignificant importation from the United States, and apparently also from the Continent.

The same remarks apply to domestics, gray drills, etc., as to white shirtings, except that United States competition is becoming felt.

In cotton prints and common qualities of trouserings—1.625d. to 3d. (3.2 to 6 cents) per yard—upon which the demand chiefly runs, the English goods practically hold the market. The trade in better qualities of printed trouserings is comparatively small.

In printed flannelettes also the great bulk of the business is in English goods. A certain amount (perhaps 20 per cent of the whole) of continental goods do, however, find a market.

In wove colored goods the great bulk of the trade in oxfords, tickings, etc., is English, but in trouserings German goods prevail.

STATISTICAL STATEMENTS FROM REPORTS OF CONSULS IN SOUTH AMERICA.

COMMERCE OF ARGENTINA.

a These vessels make regular trips between New York and Brazil and New York via Europe. In conjunction with the Red Cross Line we furnish a regular round service between Para and New York every ten days.

b About eighteen trips to New York a year.

c Our regular steamers are the two given herein, and these are supplemented by chartered steamers whenever the requirements of the trade demand. Our regular route is from New York to Trinidad, with a short stop at St. Georges, Grenada, en route each way. The round trip takes about a month, each steamer making eleven trips per year. The ports in Trinidad called at, as the requirements of the trade demand, are Port of Spain, San Fernando, and Brighton.

a Two sailings per month. Round trip New York to Haiti, Venezuela, Brazil, Havre and Amsterdam, and return, about four months. Steamship *Maurits* now building, will be ready about February, 1900.

b Round trip New York and River Plate ports and return via Brazil, coaling when necessary at St. Lucia, West Indies, occupies about three months.

c When necessary other steamers are from time to time engaged; for instance, the steamship *Newlyn* is at present running as an extra boat.

d The regular service is trimonthly, but occasionally because of press of traffic an extra steamer is chartered and a weekly service inaugurated, as at the present time. This line is the direct connection for Pacific coast ports of North and South America.

e One round trip occupies about five months.

f The steamers make a round trip in a month, stopping at the various islands as the market demands.

a Now building at Wilmington, Del.

b These are chartered steamers employed pending the completion of American ships now building.

c Agents state: You will note that all are sailing vessels, but that they have been dispatched with some regularity, and should, we think, be entitled to consideration in the compilation of South American shipping statistics.

d Sailed from New York April 20, 1899.

e Sailed from New York May 3, 1899.

f Sailed from New York May 8, 1899.

g Sailed from New York July 20, 1899.

h To sail about August 1, 1899.

i Each trip consumes about 4 to 4½ months. Steamers stop at St. Lucia and Montevideo for coal.
